- b. MIS Functions of the Academy 143
- c. Coordination 145
- d. Research 147

The state of education in Pakistan at all levels is a matter of concern. Standards of education at school and higher levels are disappointingly low. The slow progress in the improvement of standards of education both in qualitative and quantitative terms has partly emanated from the inadequate allocation of resources but more from the absence of a suitable machinery for planning, management, and supervision. In order to improve this deficiency, a Bureau of Educational Planning and Management was established in the Ministry of Education a decade ago. This Bureau rendered some useful services by undertaking training programmes and carrying out research studies in collaboration with international agencies.

In 1978 when the National Education Policy was promulgated, the aspects of educational planning, management and supervision were re-emphasized:

- i. The Federal Ministry of Education and the Provincial Departments of Education will be re-organized in order to cope with the expanding requirements and incorporating the modern techniques of educational supervision and management;
- ii. The existing infrastructure for the planning and implementation in the Provincial Education Departments will be strengthened to ensure effective planning and implementation of the policy.

In pursuance of these policy decisions, the Ministry of Education established the Academy of Educational Planning and Management as an autonomous body. The aims and objectives of the Academy, as spelled out in the Resolution of the Ministry of Education, are as under:

- i. to organize training and research programmes for different categories of personnel in educational planning, educational administration, educational supervision and educational research and evaluation;
- ii. to organize conferences, seminars, symposia, workshops on various aspects of educational development for policy makers, senior cadres of educational managers, academicians, research scholars and international experts;

- iii. to coordinate training, research and evaluation functions of other agencies connected with educational development at the provincial, national, regional and international levels;
- iv. to serve as research centre for educational evaluation, information storage and retrieval, and disseminate literature of educational planning, administration, supervision, research and evaluation;
- v. to advise and assist the Government in formulating short term, annual and five year plans for the Education Sector;
- vi. to advise and assist the Government on the formulation of Education Policies and plans;
- vii. to provide professional services and support to educational institutions and all other related agencies;
- viii. to perform such other functions which are consistent with the provisions of this Resolution, and are incidental or consequential to the discharging of the aforesaid functions.

generous assistance of the UNDP. At the same time the participants of the Seminar, UNDP Consultant and the members of the staff of the Academy deserve special thanks for their contribution, hard work and dedicated efforts in making the seminar a success. The services of the then Director General, Dr. M.H. Qazi, in organizing the Seminar and his valuable contributions are gratefully acknowledged.

March 1984

Dr. Tahir Husain  
Director General

In order to delineate its future action plan, the Academy adopted an innovative approach and organized a seminar entitled "Perspective of Educational Planning and Management in Pakistan" in December 1982. The prime objectives of this Seminar were to get together some of the key personnel working on various problems and issues in the field of educational planning and management at the grass root level; to identify the areas of mutual interest; to recommend future lines of action for various programmes of the Academy; and above all to see and ensure active cooperation of sister organizations working in the field at provincial level. The Seminar was attended by about 20 participants.

The proceedings of the Seminar were recorded on tape which took considerable time to transform them in the form of a report. The report is divided into four sections. Section A contains the opening address of the Education Minister, welcome address of the Education Secretary and concluding remarks of the UNDP Resident Representative. Section B contains papers on educational planning and management contributed by the participants and resource persons. Section C contains notes on the work plan of the Academy. Section D contains reports of the working groups; and Section E contains an overview of the Seminar.

This Seminar was organized in collaboration with UNDP which provided financial assistance. The Academy fully appreciates the

## SECTION A

Inauguration

Opening address by the Education Minister

Welcome address by the Education Secretary

Concluding remarks by the Resident Representative, United Nations Development Programme

**ADDRESS BY MR. MOHAMMAD ALI KHAN HOTI,  
MINISTER FOR EDUCATION**

r. Chairman, Mr. Himalaya Rana,  
adies and Gentlemen:

It gives me immense pleasure to welcome you, and to address you : this inaugural session of the Seminar arranged by the Academy of ducational Planning and Management. Our concern for the develop- ent of human resource is obvious. This emerges from social, public rd economic demand of education. This has promoted evolutionary owth of the educational system in Pakistan, and has called for Govern- ent intervention on a number of occasions. The education conference f 1947, the report of the National Commission on Education, 1977 rd the National Education Policy 1978-79, are suggestive of the man- er in which successive Governments have tried to guide the ducational process in the country.

In spite of our several achievements, and the importance we con- nue to attach to the development of education, the education system ontinues to beg answers to a number of questions. The system remains eefficient by whatever standards we measure it. The financial resource llocation to the sector continues to be minimal. The enrolment of 5 — age group children has never exceeded the 54% mark. The rate of teracy continues to linger at a paltry 24%. The women's education has own little improvement. The quality of education at each rung of the ducational ladder is far from satisfactory. The drop out rate at the arly primary education stage has assumed alarming proportions. The uality of scientific and technical education does not measure up to ppropriate standards. The system has evaded the permeation of Islamic ideological principles" and the principles of Islamic ethics and culture. he higher education is also susceptible to similar tendencies.

In the conference of 1977 we deliberated on these aspects of edu- ation. For a further period of one year, the views of scholars, educa- ionists, and educational administrators were elicited on each count. As a result of the in depth studies conducted at the time, the National ducational Policy was formulated in 1978 and a properly speled out rogramme for the implementation of the policy was brought out in 979. Periodical evaluation of the implementation targets have ndicated wide divergence in what was desired and what has been chieved. We are alive to this situation and are constantly making fforts to improve the efficiency of the system

Unfortunately, poor financial resources (less than 2% of GNP) for management and supervision, on the other hand. They should result in continue to impede the implementation of our educational plans. The removal of a number of distortions which have adversely affected this is not all. The implementation process has revealed serious limitations of the education system itself. Nowhere else are these more evident than in our poor management capacities and supervisory abilities. These inadequacies are transparent, be it the university or school. On the top of all this, the lack of participation of the community at large in the educational process, the alienation of the teacher, and the inability of the educational administrator to see responsibility clearly have made matters worse. Perhaps poor infrastructure at the tehsil, district and provincial levels, and little appreciation of the problems of educational ecology at these levels, have contributed more than anything else to prevent our desired progress.

Precisely these were the issues which attracted the attention of the Ministry of Education to propose, in the National Education Policy and implementation plan of 1979, that an Academy of Educational Planning and Management be set up for training personnel in educational planning, educational administration and educational supervision, for undertaking conferences, symposia and seminars for the benefit of policy makers, educational managers and research scholars and for advising the Government in formulating plans and policies in the education sector, among others.

I am glad that the concept proposed is now materializing. The Seminar organized by the Academy with the help of the UNDP, "Perspectives of Educational Planning and Management in Pakistan" will take stock of the existing state of educational management and supervision in Pakistan, and suggest to the Academy the various areas of activities which the Academy should pursue in order to make the process of implementation more effective, more meaningful and more economical.

Rest assured, the commitment of our Government to education is complete and unequivocal. This is already apparent in the policies and programmes we are pursuing and in the Special Development Programme, initiated recently. It is my hope that the features of the Sixth Five Year Plan will characterize it as a plan for education, science and technology. It is also my hope that the Academy as it grows further will be able to make a highly useful contribution by interacting with educational planners and policy makers on the one hand, and by helping the provinces in developing infrastructures for educational planning

I have no doubt that the Academy will be able to set high standards of research and training, through the hard work, imagination and devotion of its professional staff. I am happy that the Academy has started its activities on a high note, by arranging this Seminar which will attract able experts drawn from various fields to discuss such issues which have a direct bearing on the rhythm of education in Pakistan.

I am aware of the keen interest of the UNDP in the development of the Academy. Their help and assistance has contributed effectively to the early growth of the institution. With further help and assistance from the UNDP it should be possible for the Academy to come up in due time with the dimension and stature as a viable institution, serving the cause of educational planning and management in the region. Your presence here, Mr. Anilaya Rana, demonstrates the high interest of the UNDP in this subject. So also is the interest of the Government of Pakistan.

I wish the organizers of the seminar a success. I am grateful to the participants who have responded to the call of the Academy, and to the guests for encouraging us by their presence at the inaugural session.

KHUDA HAFIZ

**WELCOME ADDRESS BY MR. A.Z. FARUQUI,  
SECRETARY EDUCATION**

Mr. Hoti, Distinguished Guests  
and Participants:

It is my pleasure to welcome you to the very first Seminar organized by the Educational Academy for Planning and Management. In his opening address the Education Minister has already set out broad terms, the problems which we are facing in the field of education. The Academy has been set up so that an expert body should be available at the national level to review and analyse the whole range of issues arising in the field of educational planning and management to ascertain how these issues are being faced throughout the country and, with the help of all of you, to evolve new and imaginative approaches to old and entrenched problems. The functions I have mentioned cover the planning aspect of the Academy's work. The Academy would, of course, also concern itself with management, to the extent that deficiencies in our educational system arise out of inefficient and inadequate management. I will not attempt to descry the objectives of the Academy more precisely or in greater detail for a very good reason, which is that at this time we are not quite sure ourselves what directions the work of the Academy should take. Until the organization has had the time to establish itself, to survey the situation and to assess the resources available, it would not be prudent to burden it with a set of theoretical objectives. We feel, in fact, that even though the Academy has gained in maturity and experience it should still be flexible, both in its goals, and in its techniques.

In my opinion, the concept of a flexible, pragmatic, low profile organization is of basic importance for the deliberations of this Seminar and I would recommend the participants to give it careful consideration. I would like to have this issue discussed in some detail because of its fundamental character. If we seek to avoid setting up a framework of high-sounding objectives for the Academy, it is not because there is any shortage of such concepts. As the Minister has indicated in his speech the main problem in education is that while this sector is blessed with an abundance of fine ideas, there is very little sound implementation to support these ideas. The Academy has been created precisely to discover why the pedagogical concepts embodied in our educational policies and elsewhere, have either not been given practical shape or have not survived in the field. It would be fatal for the Academy to

fall into the same trap of sterile and unimplementable theoretical objectives. In the case of the Academy this danger of excessive theorizing and remoteness from the heat and dust of the field is particularly great. It is evident to all of you that at the national level the Academy will be removed by one step or more from operations at the ground level. It will have to operate through the Provincial Governments and through a wide range of institutions spread out all over the country, over which it has no direct control. There would be an overwhelming temptation for such an organization to generate and pass on to the actual users, reams of good advice and to hope piously that someone, somewhere is translating its ideas into action. This is the easy road for us, and if we allow it the Academy is deemed to a futile and decorative existence, like so many other organizations that we see around us in this country. If the Academy is to survive as an effective body and to do some service to the cause of education it must avoid evolving any theories or ideas in planning and management for which a realistic and carefully crafted implementation strategy is not available. It must further develop the capability of following through its initiative to the bitter end until they are either discarded as being unworkable or take firm root at the ground level.

The style of operation that I have indicated is unusual in this country. It would involve the Academy in complex and reciprocal relationships with a large number of institutions, departments, and individuals. It implies a constant process of discrete monitoring and persuasive supervision. It involves an intimate knowledge of the functioning, the intricacies and inter-relationships within the system of education. It engages an enormous and complicated exercise in human relations. It means in short that the Academy must itself practice at an advanced and sophisticated level, the techniques of management which it is going to impart to others. It would suggest to the participants in the Seminar that they might consider in some detail the operational techniques which would be necessary to develop and maintain the kind of complex, two-way relationships that I have just indicated.

I would also request you to spend some time on defining the concepts of planning and management in so far as they relate to the Academy. The danger here seems to be that if these terms are used loosely, they could be stretched to cover almost every problem in the field of education. Quite obviously this would dilute the objectives of the Academy and divert attention from the kind of particularized, implementable

goals that I have advocated. I must repeat that it is easy to make faint and experienced educationists in the country. It would be a generalizations in this field, but this is the primrose path to distasteful and unproductive exercise if the participants did not feel per- The scope of the terms "planning" and "management" should be restly free to discuss and recommend whatever they think fit. As I have ted to initiatives which are clearly seen to be within the capabilityeately stated, we ourselves have deliberately refrained from burden- the Academy. Any doubtful areas should be ruthlessly eliminated. ; the Academy with a theoretical straight jacket. The suggestions that ave put before you, therefore, should be taken to be no more than

As the Academy develop its work and gains in ex- am sure that in your deliberations you will be discussing each of thience, it would be possible to elaborate its functions in more detail, in turn, in connection with the role of the Academy. I would likt I hope that it never degenerates into a rigid organization, remote emphasise, however, that it would not be wise to make firm recommm the field and afraid of experimentation and innovation. dations about the subjects which this institution should handle. If

Academy is to be effective, it must limit not only its objectives but In the end, I would like to join the Education Minister in thanking the topics in which it takes an interest. There will be, in practice, a distinguished guests who have spared the time to attend the open- siderable limiations of time and resources. There will be, on the of of the first function organised by the Academy. Our special thanks hand, a wide range of subjects which would fall even within a restri due to the participants who responded to our invitation and have definition of "Planning" and "Management". Once again, thereeed to spend so much of their valuable time in helping us to form- choice. The Academy can either do a little of everything or pursite our basic concepts. We expect that in the future also we will meet few carefully selected items in depth. I can only indicate here ; same willing cooperation at all levels of the system of education. working rules for your consideration. The first is that nothing shoul Academy can only succeed in its very difficult task if it has the co- taken up for which the strategy of implementation cannot be woeration and good will of the institutions and the individuals concern- out in detail, including the survey of the institutions involved, with education in this country.

resources necessary, and the availability of key personnel. The sec rule arises out of the first. It is that no project should be underta which involves essential factors which are uncertain and unpredicta An example would be a dependence upon a change in social attitud an improvement in the quality of the supervisory system. To these working rules I would add a planning principle. It seems to me that Academy should plan on the basis of problem orientation, rather th project approach. It is clear that the project approach, when applic complex situations has resulted in the implementation failures wl are such unfortunate feature in the field of education. It is in line v the pattern of operation that I have tried to indicate, that the probl of education should be seen in their entirety together with all t linkages. It seems a neat and scientific method to isolate and comp mentalise problems but, once again, this is the éasy way out. We m perhaps, deliberately opt for the complex and untidy alternative.

I have put before you a few scattered thoughts about the natur the Academy's work. The intention is not, of course, to pre-empt proceedings of this Seminar. We have gathered here some of the n

**CONCLUDING REMARKS BY MR. HIMALAYA S. RANA,  
RESIDENT REPRESENTATIVE,  
UNITED NATIONS DEVELOPMENT PROGRAMME**

Mr. Chairman, Honourable Minister for Education, Secretary Education  
Ladies and Gentlemen:

It is indeed a pleasure for me to have this opportunity to address the Inaugural Session of the Seminar arranged by the Academy of Educational Planning and Management. I have listened with great interest to the observations made by the Minister for Education and the Education Secretary. The Minister, in his remarkably candid address, has brought to the attention of the participants the present shortcomings of the education system, and thus the areas in which the participants should concentrate on in this seminar.

The problems of educational development in Pakistan certainly present a formidable challenge. Resources are insufficient to meet even the restricted quantitative targets. The goal of universal primary education has not been attained even after years of effort. Technical and vocational education often seem out of line with actual requirements. Practical work in science is often resource-starved or neglected for other reasons.

To what extent is the amelioration of these problems dependent on the availability of more resources? To what extent, alternatively, is the capacity to absorb more resources limited by the management capabilities of the educational administrators? Here is one instance of the linkage between educational planning and educational management linkage to be developed by this new Academy. Every new classroom coming up in a remote rural area represents a chain of communication, reaching from a small traditional community, often illiterate, through local and provincial levels of educational administration, to the development planners and back. Small wonder that there are delays in the implementation of projects. Monitoring of projects is essential for achieving the desired results. The skills of project planning and monitoring have to be developed from national to grass-roots level if the new emphasis on social development is to yield the desired results. Planning and project planning skills should go hand in hand, so to speak, in development.

Skilled and committed teachers can inspire and educate their pupils under the shade of tree, or using local materials as the basis for practical

work, or linking the classroom studies to the life and work of the local community. Such ideas have been widely advocated as a solution to the resource problems in developing countries and to lessen the alienating effect sometimes attributed to schooling. They have foundered on the unwillingness or incapacity of the average teacher to undertake additional risks often requiring new skills. Such changes require leadership, and it could be said that in most developing countries the school supervisors and district education officers have not provided such leadership.

The process of educational management and administration, and the tasks of supervision and of structuring in-service development of teacher skills, are areas that require in-depth research to untangle the factors leading to the inadequate performance of today. Essential resources and essential policy changes could then be identified, and furthermore, courses of training could be developed to help the officers concerned in their tasks of giving constructive leaderships in the quantitative and qualitative development of education.

Nor is the problem of planning and management confined to the school system alone. Teacher education, technical education, higher education, and non-formal education, all have their own acute need for improvements in educational planning and management.

Considerations such as these led to the inclusion of the Academy of Educational Planning and Management in the National Education Policy of 1978-79, and the proposal for UNDP assistance in the establishment of such an Academy met with support from the UN Development System. As from 1979 UNDP funds have been committed for the Academy, and the delay in its establishment has been a source of disappointment to us. Over the last six months, the Academy has been one of the four UNDP projects in Pakistan selected for special surveillance by UNDP, as part of world-wide attempt to develop more timely utilization of our limited funds. I am aware that special attention to resolve the problems standing in the way of establishing the Academy has been given by the Education Secretary.

It is a great pleasure therefore that I am witnessing this Inaugural Seminar under the auspices of the Academy. I would like to conclude with the expression of hope that, from this point on, the Academy will go from strength and fulfil a pivotal role in the development of education in Pakistan. On behalf of UNDP may I offer best wishes for success in this Seminar in designing a framework for the activities of the Academy.

9. Management Information System (Mr. L. Habib Khan)
10. Relevance of the Outputs of the Higher Education System to the Economy (Dr. Abdul Ghafoor)

(See also supplementary papers in Annex 3)

## THE NEED FOR INNOVATIVE PROCESSES OF PLANNING AND MANAGEMENT AT LOCAL LEVEL

(Introductory remarks\*from the chair, at the first working session of the Seminar, by Mr. A.Z. Faruqui, Education Secretary

By now we have a long experience in this country in the techniques of planning. In fact as you are all aware we are ahead of a very large number of countries in this region in the techniques and methodologies, but what actually happens is that these known methodologies, these well established techniques are ignored, particularly at the ground level from where there should be if not actual planning, at least a feedback to planning initiatives. There should be some response, some feedback, some recognition of what the plan involves in terms of implementation. No such response or feed-back is normally coming. There is in fact a complete dead area below us at the lower level in terms of planning. In the field, at the DEO's level, there is in actual fact hardly any interest at all. The man just does not have the time. Unfortunately, a corresponding lack of interest in effective planning goes up all the way to the Provincial Secretariats. Quite obviously, there is a major implementation problem for the Academy here. In all your initiatives it is not only organizing, planning and giving ideas or setting out objectives, even when you are carrying the provinces with you in theory. When your broad objectives are put up for implementation in the form of schemes, what happens is that the critical persons in the Provincial Governments will not move the files or somebody lower down will not take the necessary routine steps to implement your ideas. So you have to follow your initiatives right down to the receiving end. Your planning initiative is not complete unless it supports the process of implementation. Therefore, if you find a problem of implementation that you cannot remedy you have to devise alternatives. Borrowing a metaphor from natural history, from biology, when the human being suffers a heart block, nature uses a device to circumvent that block by opening fresh channels, unforeseen channels, for the blood to pass. This is the kind of surgery which you might be envisaging all the time. To devise methods of overcoming blocks in the normal channels, in the normal arteries of communication with the ground level of officials about which you feel after due experience that you cannot do much or there is block which you cannot remove, then you have to devise an alternative route.

---

# EDUCATIONAL PLANNING AND MANAGEMENT IN SIND

Presentation : Abdul Jalil  
Deputy Director (Planning)  
Planning & Management Cell,  
Education Deptt.  
Government of Sind,  
Karachi.

## Structure and organization:

The structure of the Education Department in Sind is to a large extent identical with the administrative structures of educational departments in other provinces in general, but detailed organizational arrangements may reflect a higher degree of decentralization as compared with the organizational pattern in other provinces. A composite chart of the administrative structure of Sind Education Department is appended (Chart-1).

The four major administrative levels in the organizational structure of Education Department are (i) Provincial (ii) Regional, (iii) District and (iv) Sub-divisional level.

The Provincial Secretariat of the Education Department headed by the Education Secretary has an additional Education Secretary, and three Deputy Secretaries (Administration, Academic and Planning and Development). Fifteen sections in the Secretariat are headed by Section Officers who are mostly from the Secretarial Service but five of them are from education cadres. The Planning and Management Cell created in July, 1979 is a component of the Planning and Development Wing of the Department. The Director of the P & M Cell is also the Deputy Secretary of the Planning and Development Wing. Among the field offices at the Provincial level are :—

(i) The Directorate of Technical Education (ii) The Directorate of Sports (iii) The Directorate of Bureau of Curriculum and Extension Wing (iv) The Directorate of Culture (v) The Directorate of Sind Archives. Each of these Directorates are headed by a Director (NPS-20).

At the Regional levels are the Directorates of School Education and College Education for both Karachi and Hyderabad Regions. At the School level, there are fifteen educational districts for boys and fifteen districts for girl schools (three each for boys and girls in Karachi and

Chart-I

twelve each in Hyderabad). The district education office is headed by District Education Officer and supported by Deputy District Education Officers and other staff. At the sub-divisional level, the education office for schools is headed by Sub-Divisional Officers who are primarily concerned with the management and supervision of the primary schools. A number of Primary Education Supervisors are attached with each Sub-Division for supervision of the primary schools.

The administrative structure as discussed above aims to project the ladders through which educational planning and management is being organized by the Planning and Management Cell of the Department.

### The Planning and Management Cell:

Prior to the establishment of the Planning and Management Cell in 1979, the entire work concerning educational Planning and Development was carried out by the Planning and Development Wing of the Education Secretariat, consisting of five sections under the Deputy Secretary (P&D). Some of the problems that necessitated the creation of the P&N Cell included:—

- i) Planning and Development functions were being done by Section Officers and Secretariat Staff who are not professionally qualified for the complex analytical processes involved in these functions;
- ii) There was no room for the action research and investigatory cum-systematized techniques required for Planning and Management of education in the complex situations that exist in Sind;
- iii) The organizational structure and autocratic procedures of the Education Secretariat with its emphasis on routine work were not conducive to the careful, objective and systematized procedures of collection, analysis and projection of reliable educational data and statistics and the spirit of enquiry and teaming necessary for proper planning and management in education;
- iv) The planning and development work done at the Provincial Secretariat, the Regional Directorates, the District and sub-divisional level areas was mostly disjointed, un-coordinated

and too poor to generate feasible decisions on educational planning and development; and;

There was no appropriate infrastructure, facilities and professional expertise needed for effective educational planning and implementation.

The Planning and Management Cell was thus created to overcome the above problems as well as to improve and modernize the quality of Planning and Development procedures and project formulation in education.

### The Organization of the P&M Cell:

The P&M Cell is headed by a Director (who is also designated Deputy Secretary Planning and Development of the Department) and includes two Deputy Directors, one for Planning and the other for Implementation; four Assistant Directors; four Investigators and 17 other supporting staff. Details are diagrammatically illustrated in Chart - II.

### Objectives of the Cell:

The broad objectives of the P&N Cell as spelled out in the Project Document are:—

- i) To establish an infrastructure from the grass-roots level to the apex for systematic and scientific planning and development of education in Sind, manned by professionally qualified and trained persons;
- ii) to provide adequate physical facilities to achieve the objectives (i) above;
- iii) to enhance and reinforce the planning and management capacity of the persons involved in the planning and management process at the different levels of administration through foreign as well as in-country programmes.

Thus the three fold objectives of the Cell focus on appropriate and scientific planning and management work by competent, professionally trained persons; provision of adequate facilities and services for educational planning and development; and staff development for the purpose.

## Functions of the Cell:

The functions of the Planning and Management Cell include the following:—

- i) 'Educational Mapping': organization, management and supervision of educational mapping at the regional, divisional and district levels; coordination and consolidation of educational mapping in the Province; organization of action research educational planning and management;
- ii) 'Statistical Monitoring': Collection, Compilation and Analysis of educational data for the purpose of educational planning and management;
- iii) Continuous evaluation and field supervision of development projects, progress reports (monthly, quarterly and annual) and publication of educational bulletins etc;
- iv) 'Evaluation and Management Information': 'Planning and development': Policy formulation and assessment of future needs in different levels of education, preparation of educational projects, project budgeting, financial analysis and costing of plans, coordination and implementation of national and provincial plans;
- v) Development of planning and management capacity of education department at different levels of administration.

The procedure adopted by the P&M Cell in pursuance of the above functions is as follows:—

- 1) Preparation of annual development programmes: development of schemes/projects on PC I at provincial level, scrutiny and consolidation of schemes and projects prepared by field staff of the Directorates, processing of the schemes/projects for the approval of appropriate Development Working Party (CDWP or PDWP).
- 2) Revision of on-going schemes/projects wherein expenditure has exceeded the permissible limit of 15% or those that necessitate modification in the scope of work/provisions for physical facilities.
- 3) Processing of the revised on-going schemes for the approval of the competent Development Working Party.
- 4) Monitoring the implementation of approved new/on-going schemes under ADPs for the issue of administrative approval and release of funds, execution of the projects by implementing agencies; preparation of progress reports of the Deve-

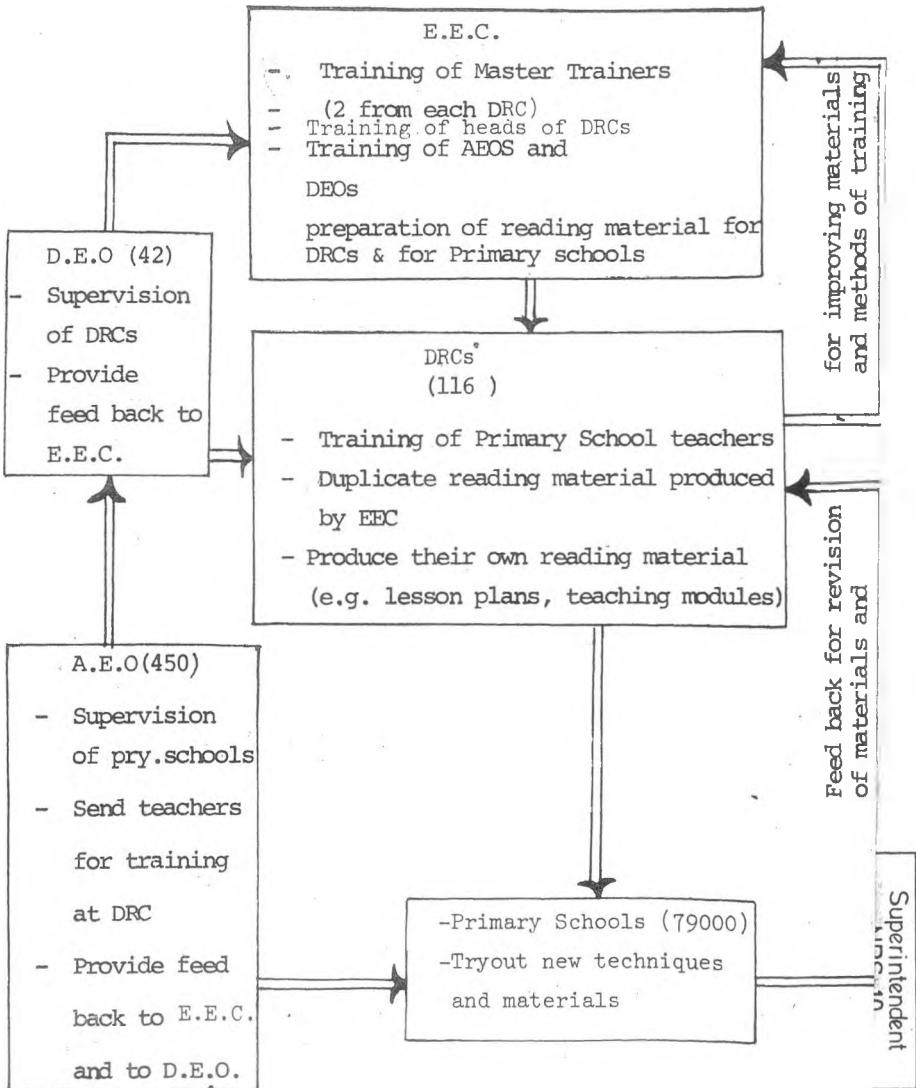

ment Schemes.

- 5) Implementation of foreign aided educational projects — UNICEF/UNDP projects.
- 6) Organization and conduct of training programmes for the field staff engaged in Planning and Development work.

## Specific Achievements of the P&M Cell:

In the first three years of operation, the Planning and Management Cell has achieved specific objectives. Some of these achievements are summarized below:

- a) Prepared and processed 85 new ADP Schemes.
- b) Revised over 71 on-going Schemes where expenditure exceeded 16% of the approved cost because of short funding in the ADP.
- c) Monitoring and continuous evaluation of 194 new and on-going Schemes under ADPs.
- d) Provided progress reports (quarterly, bi-annual and annual) on the implementation of almost all the ADP Schemes.
- e) Implemented UNICEF/UNDP aided education projects.
- f) Trained field officers (DEOS, Dy.DEOS, SDEOS and heads of institutions) in Planning and Management through three Workshops held at Karachi and Hyderabad.
- g) Preparation of ADPs and Medium Term Plan from 1980-81 to 1982-83.
- h) Currently engaged in the preparation of Sixth Five Year Plan and ADP 1983-84.
- i) Engaged in the standardization of building plans for various types of institutions, standardization of equipment and furniture requirements of institutions at different levels.

SECRETARIAT  
BUDGET 1982-83  
TOTAL

At the District level the District Education Officer is the head of office responsible for proper running of the educational system in a district at various levels of education Primary through Secondary, etc. is a separate Female District Education Officer assisted by a Deputy District Education Officers at Tehsil level. The District Education Officer for Females has less staff than the District Education Officer for Males, depending upon the number of institutions in a district.

The consolidation of information and preparation of development programmes is initiated by an Assistant Education Officer at Tehsil level under the direction and guidelines given by the Provincial Directorate and endorsed to him by the District Office. The District Education Officer at District level analyses the Tehsil Programmes, consolidates the programme of the District and transmits it to the Director of Education at Divisional level. Here the programmes of the Districts are consolidated and submitted to the Provincial Directorate. The DPI officers carry out examination and scrutiny of the programmes and pass it on to the Secretary Education for further processing and securing funds for implementation. It may be added that with the introduction of Councillors at the Union, Tehsil and District levels, the recommendations for development programmes are based on the demands of the local Councillors and endorsed by the Chairman concerned.

The College Directorate of Education is directly concerned with institutions and it has no tiers beyond the Divisional level.

**Planning and Plan Implementation:**

The preparation of development programmes begins at the Tahsil level whereas the Assistant Education Officer is responsible for making proposals in consultation with the public representatives.

The District Council headed by the Chairman of the District, who is a public representative, approves the programme up to the cost of Rs. 5 million. After completing the formalities at the District Office, the programme is consolidated at Divisional Directorates and finally transmitted to the Director of Public Instruction at the Provincial Headquarters.

At the Provincial level, the Departmental Development Working Party consolidates the programme of the Province and accords its

approval upto the cost of Rs. 4.0 million. It may be pointed out the Commissioner of the Division heads the Committee at the Division level whereas the Secretary Education heads the Development Committee. Subsequently, the Provincial Development Working Force examines the inter-sectoral programme of the Province and gives approval to each Sector up to the cost of Rs. 20 million.

The responsibility of implementing the approved development programmes rests with the Department of Education from Tehsil to Provincial level. The Secretary Education releases the funds against the approved schemes and the Assistant Education Officer at the Tehsil level incurs the expenditure with the approval of the Divisional Director. The District Education Officer and Industry Department which were previously involved in purchase of equipment and furniture etc. for the Education Department, have been eliminated in the programme. This is a radical improvement in decentralisation of the Development Programme in the Punjab.

## EDUCATIONAL PLANNING AND MANAGEMENT IN BALUCHISTAN

Address by Mr. Ijaz Malik, Deputy Director, Schools, Quetta\*)

Baluchistan province has an area of 126,000 sq. miles. It has a population of about 4.3 million according to the census of 1981. It has a 7% growth rate which is among the highest in the world. The number of educational institutions in 1947 and 1983 are given below:—

	1947	1983
Primary Schools .....	138	3,000
Middle Schools .....	16	355
High Schools .....	11	170
Colleges .....	—	28
Polytechnic Institute .....	—	1
Commercial Institute .....	—	1
Teacher Training School.....	1	1

During the period 1977-1980, 489 new primary schools have been opened with the required number of rooms and equipment; 75 primary schools have been up-graded to middle schools; 20 primary schools have been up-graded to High Schools. All the schools above have been provided with additional staff and additional classrooms. The buildings of 621 primary, 191 middle and 88 high schools have been improved. The buildings for 170 primary, 43 middle and 18 high schools have been constructed. 7 hostels alongwith the high schools have been constructed for 125 students in each school. Financial Assistance of Rs. 2.524 million was provided to Deeni Madaris; and Rs. 4.55 million to non-government & private institutions.

Three Colleges of Education were started under the Third Education Project aided by the World Bank. No college has been constructed during the period 1977-81. Improvements, however, have been made in the existing colleges for which the Federal Government provided Rs. 1.5 million. Development expenditure to the tune of Rs. 44.279 million was incurred on Education.

There are numerous problems. But some of the problems in the field of Educational Planning & Management are as under:—

- i) Shortage of qualified teachers especially female teachers and

(Extracted from recording on tape)

science teachers:

- ii) Non-availability of qualified staff to work in rural areas;
- iii) Non-availability of accommodation for teachers working in rural schools;
- iv) Baluchistan has got a very scattered population and of this vast distances have to be covered;
- v) Difficult means of transport;
- vi) Disparity of salary between teachers working in urban and rural schools;
- vii) Sense of insecurity for female teachers living alone in rural areas;
- viii) Lack of active participation/supervision by Education Department;
- ix) High rate of drop-out at almost every level of education;
- x) Non-availability of financial resources in the past;
- xi) Difficult geographical conditions and non-availability of medical facilities.

#### Strategy outlined for the next Plan period:—

- High priority is being given to broaden the base of the educational pyramid.
- For the expansion of primary education, Pesh Imam is involved to impart religious education.
- New polytechnic and agro-technical institutions will be established.
- For the teachers and the students, hostel facilities will be provided.
- Special allowances will be granted to the teachers who live in far flung areas/who migrate from urban to rural areas for the purpose of teaching.
- Development of play-grounds and promotion of sports will be given priority.
- Number and rate of scholarships will be improved.
- Scholarships will be given to female students in rural areas to attract them to school.
- In-service teacher training for teachers will be organized to equip them with modern techniques/methods in teaching and to inculcate missionary zeal to work selflessly.
- Grant-in-aid to Deeni Madaris and non-Government educational institutions will be provided.

According to the 1981 census, the primary school age (5-9) population of Baluchistan was 700,000. Total enrolment on the primary level was 150,000. This means that more than 500,000 school-age children were out of school. To overcome this problem 360 Mosques will be opened every year for the improvement of primary education during the Sixth Five Year Plan. Even these will not be able to cater for the needs. In 1983, we will have 800,000 of potential students and by this time we will be in a position to provide educational facilities to 172,000 only. We may estimate that in 1988 we will have 1.1 million children and we will be providing educational facilities to 250,000 only.

#### Summary Note:

#### STRUCTURE OF THE EDUCATION DEPARTMENT

The Provincial Secretariat of Education (Chart-I) is headed by the Provincial Secretary, Government of Baluchistan. The Department has the following main components, i.e. Colleges, Schools and Bureau of Technical Education and Extension Centre, each headed by a Director. Secretary of Education is responsible for overall administration of the Education Department. The Director of Education, Colleges is responsible for the administration of college education. He is assisted by two Deputy Directors. One is responsible for Planning; and another for Administration. In addition to these two Deputy Directors there are other officers like Assistant Secretary, Accounts Officer, Scholarships Officer, Deputy Director (Physical Education), Assistant Director (Colleges), Principals of Government Colleges, Principals of Intermediate Colleges, Principals of the Technical Institute and the Principal of the Commercial Institute. All these officers are responsible for their concerned sections.

The Director of Education (Schools) is responsible for general administration of primary, middle and secondary education. He is

- i) Educational planning;
- ii) Administration;
- iii) Audit and accounts;
- iv) Implementation;
- v) Female education

The Deputy Director, Educational Planning prepares the plan for the Department upto Secondary level; Deputy Director, Administration, assists the Director of Education in administration of primary and

secondary schools. Deputy Director, Audit and Accounts up-keeps the audit plus Account matters upto Secondary level; Deputy Director of Implementation prepares the progress reports of implementation of education upto Secondary level; and Deputy Director (female) looks after the staff administration of female education. Besides these Deputy Directors, there are Divisional Education Officers, female Assistant Director (Planning), Statistical Officer, Accounts Officer, Audit Officer, Assistant Divisional Education Officers, Assistant Director (Administration), Administrative Officer, District Education Officers, Registrar, Departmental Examinations, Principals of Comprehensive Schools, Deputy District Education Officers, Assistant District Education Officers and Headmasters/Headmistresses. These officers work in the concerned sections.

Director, Bureau of Curriculum and Extension Centre is responsible for curriculum development and extension services in the Province. He is assisted by two Deputy Directors-Deputy Director (Extension), who is responsible for planning of in-service courses in the Province and Deputy Director (Curriculum) who helps the Director, Bureau of Curriculum. These officers are assisted by Accounts Officer, Assistant Directors, Subject Specialists, Principals of Government Elementary Colleges, Principals of Agro-Technical Teacher Training Centres and Headmasters.

## EDUCATIONAL PLANNING AND MANAGEMENT IN THE NORTH WEST FRONTIER PROVINCE

Presentation:  
L. Habib Khan

Until 1979 the structure for Planning and Management of Education in NWFP Province was more or less the same as inherited at the time of independence. The overall incharge of education in the Province was the Education Secretary who was assisted by two Deputy Secretaries and a Planning Officer in the Secretariat. In the field, in addition to other staff the Director of Education was entirely responsible for the education in schools and colleges of the Province. He had a number of Deputy Directors who assisted him in the Directorate whereas the Divisional Inspectors and District Inspectors of Schools look after the issues in field.

As the number of schools and colleges increased, it added to the problems of planning and management such as decision making, supervision and evaluation, all of which centred around the Director of Education. In order to streamline the administrative structure in NWFP, the Provincial Government set up a Committee in 1978 to examine the existing structure and delegation of powers at different levels, with a view to:

- identify wasteful organisational practices;
- recommend a sound division of work at the different tiers of the organization taking into account the expansion and variations in the system;
- recommend line of authority and command with a view to effecting a degree of decentralization;
- recommend appropriate system of management bearing concept of line and staff in consonance with principles of scientific management.

In light of the recommendations of the Committee, the administrative structure at Directorate level was reorganized, w.e.f. 1.1.1979. bifurcation into two separate Directorates of Education, namely Directorate of Education (Schools) and the Directorate of Education (Colleges) was carried out. In case of Schools, reorganization was further carried out at Divisional, District and Sub-Divisional levels. Brief sketch of the reorganized structure is given below (chart - 1).

**Secretariat level:**

The Provincial Education Department is headed by the Secretary who is the overall authority for administration, planning and management. As we know Education is provincial subject and as such the policy guidelines provided by the Federal Ministry of Education are planned into actions at the Provincial level according to its own requirements. At the Secretariat level, the Chief Planning Officer (CPO) receives schemes prepared in various Directorates of the Department. The CPO is assisted by two Planning Officers and a Statistics Officer.

At the Secretariat level, the Chief Planning Officer (CPO) receives schemes prepared in various Directorates of the Department. The CPO is assisted by two Planning Officers and a Statistics Officer.

The overall incharge of school education in the Province is the Director of Education, Schools who coordinates the work of the four Divisional Directors of Education responsible for their Administrative Divisions consisting of the District Education Officers (DEO), male and female. DEO is the overall incharge of all schools in the district, he or she directly looks after all the high schools. The primary education, which constitutes a larger portion of the schools has been entrusted to the Sub-Divisional Education Officer (SDEO) at Tehsil level. SDEO is accountable to the DEO.

There are about 60 colleges in the NWFP. The Director of Education is entirely responsible for their planning and management. The Director is accountable to the Secretary Education. The Director is assisted by a Deputy Director and 3 Assistant Directors, one each for Planning, Libraries and Physical Education. All these persons are drawn from the college cadres.

According to the Education Policy there is no provision for opening of new Intermediate Colleges. However, the Governor of the Province in certain cases has the powers to open a new college with the consent of the Director of Education. The planning functions of the Directorate fall under two broad categories:

(i) Developmental schemes  
(ii) Non-developmental schemes

**Developmental schemes:** Construction of new college buildings, renovation/improvement of the existing college buildings, minor repairs and major repair work carried out in colleges and in the directorate, purchase of office/laboratory equipment, library books, and furniture, selection of site and purchase of land for the new college buildings, construction of student hostels, construction of residential accommodation for teaching staff, ministerial and other supporting staff and award of merit scholarships to the college students.

**Non-developmental schemes:** This directorate is specifically responsible for the technical education in the Province. It is headed by the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors.

The up-gradation of primary schools or middle schools is all done at the Directorate level. At the Directorate level there is an Assistant Director, Planning who is responsible for the functions described under the heading of Assistant Director, Planning of the College Directorate. The proposals of the Directorate are forwarded to the Chief Planning Officer at Provincial level who after scrutinising the proposals submits them to the concerned authority for approval.

This directorate is specifically responsible for the technical education in the Province. It is headed by the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors.

This directorate is specifically responsible for the technical education in the Province. It is headed by the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors.

This directorate is specifically responsible for the technical education in the Province. It is headed by the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors.

This directorate is specifically responsible for the technical education in the Province. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors.

This directorate is specifically responsible for the technical education in the Province. It is headed by the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors. The overall incharge of technical education in the Province is the Director of Technical Education, who is assisted by a Deputy Director and several Assistant Directors.

for various colleges, continuation of temporary posts, schemes for conversion of temporary posts into permanent posts, nominations and training abroad are handled by the Directorate of Colleges. For the management, as we know Education is provincial subject and as such the procedure laid down by the Federal Ministry of Education is followed.

At the Secretariat level, the Chief Planning Officer (CPO) receives schemes prepared in various Directorates of the Department. The CPO is assisted by two Planning Officers and a Statistics Officer.

The overall incharge of school education in the Province is the Director of Education, Schools who coordinates the work of the four Divisional Directors of Education responsible for their Administrative Divisions consisting of the District Education Officers (DEO), male and female. DEO is the overall incharge of all schools in the district, he or she directly looks after all the high schools. The primary education, which constitutes a larger portion of the schools has been entrusted to the Sub-Divisional Education Officer (SDEO) at Tehsil level. SDEO is accountable to the DEO.

SDEO is responsible for planning, management and supervision of primary schools in his/her respective Tehsil. He is assisted by ASDEO who collects the educational statistics and assesses the demand of the public and makes a proposal in consultation with the local authorities for the opening of a new primary school.

The proposal is passed on to the DEO who is the overall incharge of the educational planning at district level. He consolidates such proposals at the district level and transmits it to the Divisional Director. At divisional level all such requests received from the various District Education Officers are consolidated and finally in the form of recommendations forwarded to the Directorate for approval.

The up-gradation of primary schools or middle schools is all done at the Directorate level. At the Directorate level there is an Assistant Director, Planning who is responsible for the functions described under the heading of Assistant Director, Planning of the College Directorate. The proposals of the Directorate are forwarded to the Chief Planning Officer at Provincial level who after scrutinising the proposals submits them to the concerned authority for approval.

This directorate is specifically responsible for the technical education in the Province. education in the Province. The planning and management process is the College Directorate.

## IN-SERVICE TRAINING OF SUPERVISORS/WORK OF THE EDUCATION EXTENSION CENTRES\*

### Training Aspects of Educational Planning in the Province

Dr. Parveen Riaz

Until 1980 there was no specific arrangement for the training of educational administrators. Management Unit for Study and Training (MUST) was established in order to train the educational administrators. MUST identifies for which they have been trained and what are the areas in which training is needed. MUST identifies the various levels, designs training programmes and implements these programmes in order to cater to the needs of the Province.

### Structural organization:

The organizational structure of the supervision system in the various provinces of the country is almost the same. At the top is the Director of schools assisted by the Divisional Director(s) or Deputy Director(s). Incharge of a district is the District Education Officer (DEO) assisted by the Deputy District Education Officer (DDEO). There are both male and female DEOs in a district. They are further assisted by Sub-divisional District Education Officers (SDEOs) at Tehsil level. In some provinces they are further assisted by Assistant Sub-divisional Education Officers (ASDEO) or Supervisors at Sub-Divisional level.

### Functions:

The responsibilities of the supervisory staff are as follows:—

#### DEOs

1. Overall administration and management of school education in the district.
2. Inspection of high schools.
3. Appointment and transfers of teachers.
4. Supervision of work and activities of various supervisory staff.

#### DDEOs

1. Assisting DEO in overall administration and management of schools in the district.
2. Performing some specific duties assigned by DEO.

For further details on in-service training of teachers and supervisors in Punjab and Baluchistan, please see Annexures.

### SDEOs/ADEOs

1. Overall administration and management of schools in the Division/Tehsil.
2. Inspection of middle and primary schools.
3. Drawing and Disbursement of funds (staff salaries, etc).
4. Maintenance of accounts.
5. Transfer of teachers.
6. Supervision of the work of supervisors where applicable.
7. Examinations at primary level.

### Supervisors

Inspection of primary schools (in Sind).

1. Enhancement of educational supervisory capacity at primary level.
2. UNDP Programme for Training of Educational Administrators.
3. Establishment of Decentralized Resource Centres.

They have organized a workshop and some training courses for supervisory personnel under these programmes. The Decentralized Resource Centres are established actually for the training of teachers. In-service training of supervisory personnel also forms an essential part of So far 45 ADEOs have received training.

In the remaining provinces, the Education Extension Bureaus/Units have organized occasional training programmes for special projects such as National Training Kit for Primary Schools. In addition, the Planning and Management Cell, Karachi, organized training programmes in planning and management for supervisory personnel. The Management Unit for Study and Training, Peshawar also organized some training workshops for district and divisional level school managers. The Bureau of Curriculum and Extension Centre, Quetta is planning to organize training courses for the supervisors. They have developed an Inspection format for the guidance of inspection teams/supervisory personnel.

In short, there is no regular programme for the training of supervisory personnel both at national and provincial levels. Only occasional programmes/workshops were organized which also did not cover all the personnel concerned. Even the trained persons can not utilize their training, for they seldom get time for school inspections. Therefore, there is need to review the organizational set up of supervision system and the working of Educational Extension centres, so that they organize training courses for the supervisory personnel as regular feature of their training programmes.

### **In-service Training of Teachers:**

The Education Extension Centre in each province is also responsible for in-service training of teachers for class 1 through class 10. These centres organize teacher training programmes regularly. Duration of these programmes varies from 1 week to 2 months. The objectives of these courses include:

1. Orientation of teachers to new curricular programmes.

### **Inspection of Schools:**

Inspection of schools is one of the most important responsibilities of the supervisory personnel. This is one of the most neglected aspects of their duties. All of them are so over-burdened with administrative work that they are left with no time to go to the field and visit schools. Even if they do so, their performance is very traditional, i.e. they emphasize maintenance of discipline in schools and checking of registers, daily diaries, etc. They can hardly pay attention to the methods of teaching used by the teachers. They are not in position to provide professional guidance either in new methodologies of teaching or changes in curriculum content. This is because of the reason that they themselves are not aware of or exposed to these aspects of supervision. There are many other reasons but the most important is lack of in-service training of the supervisory personnel which is seldom being done in any of the provinces except the Punjab.

### **In-service Training of Supervisors:**

There is no set arrangement for in-service training of supervisory personnel. The Education Extension Centres in the provinces are supposed to organize training programmes for teachers and the supervisors. But they organize such programmes for the teachers only except in the province of Punjab. The Punjab Education Extension centre has been organizing in-service courses for supervisors but since 1981 this practice has been stopped. The training programmes are held up because of shortage of funds. However, they are working on alternative programmes for in-service training and improving system of supervision in the provinces with the help of UNDP and UNICEF. These include:

## EDUCATIONAL RESEARCH IN PAKISTAN

Presentation: Dr. Mukhtar A. Bhatti  
Secretary General  
National Education Council

2. Training in new techniques of teaching.
3. Training in use of innovative teaching aids such as Teaching Kit.
4. Training in new techniques for testing and measurement,

Sometimes, the Extension Centres organize training programmes for Master Trainers. These Master Trainers are senior teachers, high school teachers and headmasters. After intensive training in the above mentioned techniques, they are supposed to run training courses on similar lines at the local level for teachers of Primary and Middle schools. This method ensures covering as many teachers as possible during the shortest possible time. The Extension Centres organize training programmes at their campus or at some Teacher Training Colleges/Centre Schools depending upon the area to be covered.

The pattern of in-service training of teachers is the same in all provinces except Baluchistan. In Baluchistan, there is acute shortage of trained teachers. Therefore, untrained graduates are employed in schools and are then given training in the form of condensed courses at Teacher Training Colleges of the Province. There are two types of in-service training programmes being organized in this Province, i.e.

- a. Professional training of untrained in-service teachers.
- b. Short orientation courses and curricular training of trained in-service teachers.

But in spite of all the efforts of the Extension Centres, it is not possible to organize training programmes for all the teachers working in the field. Therefore, there is need to strengthen the in-service training operation, so that the majority of the teachers are given training as envisaged in the National Education Policies issued from time to time.

The task of upgrading teachers' skills is thus shared in principle by supervisors on their school visits, and by Extension Centres on campus or occasionally at Teachers' Colleges and Centre Schools. Their combined efforts at present fall short of requirements. The Academy may investigate ways of improving the situation.

Research is a difficult and uphill task. It requires a lot of time and patience. The administrator cannot afford to wait for the findings of research to take a decision. Therefore research is relegated to secondary importance. Another reason for this state of affairs is the platonic approach to decision-making, in which we draw idiosyncratic conclusions on the basis of our judgement and experience rather than research. Thus we see that in Pakistan, the tradition of research is not deep rooted. It still in its infancy. Those who generally take decisions without research in fact blocking the way of its development.

Linked with the lack of a tradition of research is the scarcity of researchers. People with degrees in education who have taken a few courses in research methods have only had initial training for research without sophistication. In these courses the emphasis is more on essay writing, polemic discourses or at best a review of opinion. It is not a training in empirical research. Prior to 1960 we had no institution doing educational research. After 1960, however, Institutes of Education and Research (IER) were established in Lahore and Dacca. Realising that Masters Degree projects taken up by students were not real research, a research wing was established at IER Lahore.

Educational research requires trained manpower, persistent hard work and lot of finances. In IER, Lahore, a number of projects were initiated, e.g. for psychological testing, aptitude tests and intelligence tests, etc. Basic vocabulary research was also initiated. The Manpower Commission was also able to conduct research into the conditions of education in the country. However most of the research undertaken was that of survey type or collection of existing data. So we see that experimentation or empirical designing of research did not gain ground in Pakistan and real empiricism was missing. What are the factors responsible for this? The foremost is that we do not possess a sufficient combination of mathematicians, statisticians and educationists. People who could design research and interpret data are very few and if they are available, they are not assigned any important projects. Such rigorous studies are lacking even in IERs because the faculty there is preoccupied with instructional assignments which are quite heavy.

Establishment of institutions at various levels has been recommended quite often but seldom accomplished. We recognise the importance of research and talk a lot but do very little.

The collection of data has been the popular form of research in our country. Even there we have miserably failed. The Academy of Educational Planning and Management will need to have data. It should be concerned about, e.g. school mapping and male and female literacy. Three years ago we consolidated whatever data was available in the research Wing of Ministry of Education. After that no such reports come up. So, the latest data available pertains to five years back. We do not know the existing situation. Effective planning depends on knowing the existing situation. Some foreign observers like Karvansky and Johnson have done studies and collected data. But our own studies have remained deficient. The Planning Commission has also done a reasonable good job. But there has been no specific institution to support or conduct research.

If we continue to have the old attitudes in which we do things without research, the research is not required. In such judgemental decision making, people are shy of research. Research is an eye opener which reveals truth. As professionals, we do not want to admit mistakes. There is obstinacy on our part. Educational research is a wide open field which has so many facets. We have to ask questions and then we must get answers. You ask questions like: What are the goals of education? Nature of curriculum? Time allocation to different activities? How to guide students in various disciplines and counselling them and so on.

While there are some committed individuals who are dedicated to doing research on their own, we have lacked institutions which support this activity. The institutions do not require people to pursue research so it remains a personalised activity. Quite often people complain that they do not get money for research. This is fallacious. Money has been available or can be made available very easily. I think that in Curriculum Wing alone, 10 lac rupees are even now available for various projects. It is a sort of forgotten money. In my view, availability of money from the Federal Ministry of Education has seldom been a great problem.

I have made a number of critical observations, I must also suggest some remedies. We now have thousands of people with Masters Degrees in Education. We should select people by preparing a directory of those interested in doing research and we can sub-contract them for this

Perhaps we should identify such people from every district and fund them financially for undertaking research. Teacher education institutions could and should play an effective role in education research.

Utility of research becomes questionable if we cannot use it. So research-related topics should be selected and findings disseminated. A national coordination and information dissemination system is required. Up to four thousand projects may have been completed in one part of the country but this is not known elsewhere. We are ineffective in terms of coordination. Therefore an effective information retrieval system should be developed.

Nevertheless, we should not be cynical and should appreciate the developments. There are many more people trained in research now than there were 20 years ago. The projects being assigned by the Open University to students of Educational Planning & Management are very good. I am sure these people will be able to tackle the problems of Educational Planning and Management. We should make all efforts to build up a reservoir of talent in this field.

**M.A./DIPLOMA  
IN  
EDUCATIONAL PLANNING AND MANAGEMENT**

- Paper presented by:
- Dr. Shaukat Ali Siddiqui
  - Dr. M. Athar Khan

**The Institute**

The Institute of Education and Research Cell is an integral part of the Faculty of Pedagogy and Social Sciences of the Allama Iqbal University. It was established in 1975 under a provision of the constitution which chartered the founding of the Open University, as a national institution of distance education. The three main areas of activities of the Institute are (1) teacher training, (2) preparation of key educational personnel in E.P.M., and (3) educational research. In addition to these activities, the Institute is also undertaking several research studies, particularly in adult education and similar other projects which are sponsored by national and international agencies.

**Teacher Training**

In the area of teacher training, the Institute has concentrated on (1) Primary Teachers' Orientation Course (PTOC), (2) Primary Teachers' Certificate Course (PTC), and (3) a Certificate in Teaching programme.

The Institute is also offering an elective course on Educational Planning at the Intermediate and B.A. level under the general education programme of the University.

**Personnel Education in E.P.M.**

*M.A. in Educational Planning and Management (EPM)*

The Master of Arts degree programme in Educational Planning and Management (EPM) was introduced by the Institute in 1976. The programme aims to provide training in EPM to educational personnel in government and semi-government institutions and organizations. The programme is meant primarily for the in-service educational personnel who are presently engaged in educational planning and administrative work. Candidates to the programme are selected from among the nominees from various departments and institutions on the basis of their academic

achievements and job experience. Admissions to the programme are made twice a year – in April and October. Currently about 250 students are enrolled in various courses of the programme from all parts of the country.

*Nature of the M.A. EPM Programme:*

The content of the courses for the EPM programme relates to the requirements of educational planners and administrators in the country. The programme of M.A. in Educational Planning and Management serves as an advanced and specialized in-service training for those who are already in planning and administrative positions, but at the same time it is also a pre-service professional training for those who are presently working in teaching or other related positions in schools, colleges and universities etc. and who, by virtue of their seniority or otherwise, are expected to be assigned planning or administrative jobs in future.

**Requirements:** In order to qualify for a Master of Arts degree in Educational Planning and Management, a student is required to complete a minimum of 8 credit courses, of which four are compulsory and one, a research project, is a required course. Courses equivalent to three credits could be taken from the elective courses. Following are the courses and their classifications.

**1. Compulsory Courses**

Code No.	Title	Credit
EPM-501	Basic Concepts of Educational Planning.	1
EPM-502	Processes of Educational Planning	1
EPM-503	Plan Implementation and Educational Management.	1
EPM-504	Curriculum Planning and Evaluation.	1

**2. Elective Courses (any of the following Courses totalling to three credits)**

EPM-505	Economics and Financing of Education.	1
EPM-506	Development Education.	1
EPM-507	Educational Research and Statistics.	1
EPM-508	Project preparation, Implementation and Evaluation (under development)	1

EPM-509	Educational Facilities (under development)
EPM-511	Population and Planning (under development)
EPM-512	Educational Administration and Supervision (under development)

### 3. Required for award of degree

EPM-510	Research Project.
---------	-------------------

Each of the above courses, except EPM-510 Research Project correspondence-tuition course of 18-20 weeks duration. At the end of the correspondence phase, each student is required to attend a one-day group training workshop for the course which he or she takes during the semester. The workshop is usually held at the Allama Iqbal University campus at Islamabad. These workshops are conducted by the faculty of the Institute and experts from within the country as well as from international institutions of repute.

#### Evaluation and assessment of students.

Students are regularly assessed for their performance during the course. At the end of each course. During a course, a student completes assignments and sends to his or her tutor three assignments (designed on the pattern of take-home tests) at a certain interval scheduled by the Institute. These assignments are communicated to both the students and the tutor at the beginning of each course. A fourth assignment is presented by the student during the group training workshop. To pass a course and earn a credit, a student has to secure a minimum of 40 percent of marks in the assignments component as well as in the final test given at the end of the group training workshop.

#### Method of Instruction:

The instructional methodology combines the features of teaching by correspondence and face to face contact with the students. During the correspondence phase, assignments are used to fill the gap created by the absence of a teacher in the distance education system: the group training workshops bring the students in a face to face situation with their tutors and experts and provide them an opportunity of exchange of ideas and experiences, with each other as well as with the expert

#### Duration of the Programme.

The EPM courses are offered on a semester basis. In one semester, a student can register for a maximum of two courses. Normally it should take two and a half years to complete course requirements for a Master Arts degree in Educational Planning and Management. But depending on the learning ability of a student and time available to him or her for study, it may take longer to complete the requirements for the degree.

#### Instructors and Resource Persons.

The Institute has full-time employed staff which consists of a Director, 3 Professors, 2 Associate Professors, 5 Assistant Professors, 4 lecturers, and a number of Research Assistants. The Institute's instructional staff has specialization in various fields of education with considerable experience in teaching and research.

In addition to the full time instructional staff the Institute also engages on part-time basis over a dozen tutors who are experts in the field of educational planning or management. They are mostly officers of the ranks of Joint Secretaries, and Deputy Secretaries/Deputy Chiefs of Departments and Ministries of Education, Bureau of Planning, Planning Commission, PIDE, and other related organizations.

Besides the full-time and part-time instructional staff the Institute utilizes the services of local and international experts as resource persons in the group training workshops. Many of these experts also collaborate in the preparation of reading materials for the EPM courses.

#### Development and Review of EPM Courses.

The EPM Coordination Committee of the Institute is responsible for the development of new courses and review of existing courses of the Educational Planning and Management Programme. A Committee of experts on Educational Planning and Management consisting of the faculty of the Institute and four experts from outside advises the Academic Council on the development and review of the courses. Assistance from other international institutions is also sought in this regard. Sometimes, the International Agencies such as UNESCO Offices provide certain material for use in the courses. In such cases the material obtained from international sources is re-written to adapt it to the needs

of local educational personnel, and to suit the system of distance education.

**Eligibility for Admission to M.A. EPM Programme.** In order to register for M.A. EPM Programme, or any of its courses, a candidate must possess at least a B.A./B.Sc. degree from a recognized university. The candidate must be in full time employment with a government, semi-government or autonomous department or institution of education. Preference is given to candidates with higher qualifications, job experience in planning and/or administration. The candidate must also be a nominee of his/her department.

**Admission Procedure.** For admission to the M.A. EPM degree programme or one of its courses, candidates are nominated by their respective departments or institutions, on a prescribed form supplied to them by the Institute or obtainable from the Institute or one of the Regional Offices of the Allama Iqbal Open University. Every semester about 100 candidates are selected for admission in the programme.

**Sponsorship of T.A./D.A. for attending Group Training Workshops.** Travelling and Daily Allowance for attending the Group Training Workshops by the students, is normally paid by the nominating departments and agencies. The University and the Institute do not take any responsibility of students' expenses for attending the workshops. In view of the importance and usefulness of the EPM programme, the Department of Education, Governments of Punjab, Sind, NWFP, Baluchistan and Azad Jammu & Kashmir have already issued directives to their subordinate offices for sponsorship of TA/DA to their nominees for attending the M.A. EPM group training workshops.

### **Diploma in Educational Planning and Management**

For those persons, who for any reason, cannot go all the way to complete requirements for a Master of Arts degree in Educational Planning and Management, the University has introduced a programme of studies leading to a Diploma in Educational Planning and Management. To be eligible for a Diploma in EPM, a student must complete the compulsory courses i.e., EPM-501, 503 and 505, and any one of the EPM courses except EPM-510. In addition to completing the courses, the student must pass a three hours (duration) comprehensive test administered at the end of every semester.

Candidates for admission and other requirements are same as for A. EPM degree programme.

### **Centre of Excellence**

The Institute of Education and Research of the Allama Iqbal Open University was selected as the Centre of Excellence in Education under the Centre of Excellence Act of 1974. The major purpose of the Institute as a centre of excellence will be to provide facilities for high quality study and research programmes in education, especially in the fields of educational planning and management. One of the functions of the Centre will be to train and retrain key personnel in education for the progress and qualitative improvement of education in the country. The Institute is planning to offer M.Phil and Ph.D. degrees in education with emphasis on educational planning and management.

### **Research**

The Institute of Education and Research Cell is the Centre of the research activities of the University. A Research Cell established within the Institute carries out research on the University's teaching activities, media and methods of instruction. The Institute provides guidance and support to individuals and other Departments of the University in carrying out research studies within the framework of the University.

One important function of the Institute is teaching the methods and techniques of research and statistics and training of educational personnel in high level professional and applied research in the field of educational planning and management. Research, therefore, has been included in the curriculum of M.A. EPM programme as a requirement for award of the degree. Every EPM student has to undertake a research project as part of the requirements for the M.A. degree. Presently 32 students are engaged in research for their degrees. The research topics selected by the EPM students are of practical nature which have immediate relevance with their professional activities.

The Institute has also undertaken several studies for the Ministry of Education, and other Departments as well as UNICEF and UNESCO.

**ANNEX : LIST OF EPM-510 "RESEARCH PROJECT" STUDENTS  
TOPICS OF RESEARCH AND MAJOR ADVISORS  
APRIL 1981 SEMESTER**

S. No.	Name of Student	Topic of Research	Major Advisor
1.	Mrs. Qamar Astan Khan	Effects of long leave of teachers of girls colleges of Karachi on academic performance of their students.	Mrs. Razia Abbas
2.	Miss Tasneem Yaseen Khan	Causes of the girl students lower achievement in XI Science Pre-Medical in the colleges as compared with their scores in the high school examinations.	Dr. M. Athar Khan
3.	Mr. Laung Khan	Causes of failure in attaining the goal of universal primary education of boys as set forth in the Education Policy (1972-80) – a case study of boys primary education in Hyderabad.	Dr. M. Athar Khan
4.	Syed Fazal-i-Qadir	Problems of supervision in the primary schools of Daggar sub-division of Distt. Swat.	Dr. Zulkaif Ahmed
5.	Mr. Abdul Rahman Siddiqi	The problems of primary education in Hyderabad.	Dr. Zulkaif Ahmed

Mr. Khalid Waseem	A survey of the facilities for teaching Chemistry in Colleges of Multan and surrounding areas and their suitability for teaching the subject at the intermediate level.	Dr. M.A. Bukhari
Mr. Imdad Ali	Causes of malpractices by students in examinations/tests in polytechnic institutes in Sind and their remedies.	Dr. A.R. Saghir
Mr. Faz-ullah Zuberi	A study of vocational attitudes of VIII class students in selected secondary schools of Punjab, developed as a result of taking industrial arts.	Dr. Miss I.N. Hassan
Mr. Manzoor Yusuf	A study of administrative problems of the headmasters and headmistresses of secondary schools in Multan City.	Miss Rashida Sheikh
Dr. S.A. Ghaffar	Development of strategies for the universalization of primary education in Pakistan in the light of experiences of selected developing countries in Asia.	Dr. A Qayyum

**LIST OF EPM-510 "RESEARCH PROJECT" STUDENTS:  
TOPICS OF RESEARCH AND MAJOR ADVISORS  
APRIL 1982 SEMESTER**

S. No.	Name of Student	Topic of Research	Major Advisor			
				Mr. Mohammad Hussain	Analysis of effectiveness of items of teaching kit for primary schools in Tehsil Shakargarh.	Mrs. Razia Abbas
				Sister Sheila Keane	Feasibility of organizing a community based non-formal education centre for school dropout girls of Rawalpindi City.	Dr. M. Athar Khan
1.	Mr. Iftekhar Ahmed	A comparative study of the general education courses of conventional and non-formal system.	Dr. Miss I.N. Hass			
2.	Mrs. Zeb Mahmood	Problems of implementation of Five Year Plans with particular reference to primary education.	Dr. Zulkaif Ahmed	Mr. Mohammad Nasrullah Khan	Relationship of social, economic and educational background of parents with their fertility level.	Prof. Javed Iqbal Syed
3.	Mr. Mohammad Ishfaq Khan	Rural based industrial development in Poonch District and its implications for requirements of skilled workers to be produced by the educational institutions of the District.	Dr. Arif Zia	Mr. Nazeer Ahmed Sheikh	Causes of imbalances between supply and demand of technically trained manpower by Govt. Polytechnic, Commercial and Vocational institutions in Punjab.	Dr. Aslam Asghar
4.	Mr. Najmuddin Mangrio	Development and implementation of curriculum in Pakistan.	Dr. Zulkaif Ahmed	Mr. Saeed Ahmed Chaudhry	Factors influencing enrolments and dropouts of the AIOU courses in Faisalabad.	Dr. Maqsood Alam Bukhari
5.	Mr. Mohammad Karim Khan	Development of a Management Information Service for educational planning NWFP.	Miss Rashida Sheikh	Mr. Abdul Hameed Janjua	Organizing vocational education through non-formal system of education.	Dr. Aslam Asghar

# MANAGEMENT INFORMATION SYSTEMS

L. Habib Kh

## A. Background

1. Pakistan inherited an administrative set up, established by colonial powers with the particular objective of maintaining order. It was highly centralized in nature as key policy decisions were made by them and routine decisions left to indigenous civil servants. Unfortunately, very little efforts been made to modernize the administrative system and gear towards the realization of those objectives set forth in an independent Islamic society. The set up of educational administration more or less the same as established in 1929. The old code of education designed in 1935 is still in practice.

2. We see from our day to day examples that this out-administration has given birth to numerous problems. In order to pave the path for extending this discussion further it is necessary to illustrate a few cases.

- 1) Teachers transfer and placement is a tedious task and their dissatisfactions are based on this factor. It is observed that teachers are posted away from their hometowns. If a teacher quits his job in the mid of session it takes more than 4-6 months to get his replacement because of lengthy procedure. Information retrieval of particular teachers takes month.
- 2) The supply of equipment to Institutions is hindered due to lack of inventory. In the absence of such inventory equipment are supplied to those schools where they were not needed.
- 3) Monitoring of budget and disbursement of funds is a lengthy process and takes 2-3 years to settle such matters.
- 4) A teacher retires after sacrificing his valuable life time. The Department of Education and due to lengthy procedure and voluminous files it takes years to obtain his pension.
- 5) No information is readily available with a supervisor that would give you an idea about the size, nature and facilities of schools, or the schools in which experiments

- 6) There is no information about the use or misuse of teaching kit by the teachers.
- 7) Statistics for Education are 3-4 years old. Realistic planning for education is not possible with old, unreliable and non-valid data.

These seven examples and numerous others are indicative of various problems which are the product of our educational administration.

## Management Information System

3. The MIS presents a solution to the above and many more problems which are a bi-product of Educational Administration. Let us briefly see what MIS is? It is composed of Management Information and System. These three words need a little elaboration.

4. **Management** may be defined as the skill through which you seek the involvement of other members of an organization in a coordinated manner in order to achieve the objectives. An analogy of Management could be hockey team where the captain along with his team-mates struggle together to score the goals. Management is more democratic in nature which should be characteristic feature of an independent society like Pakistan.

5. **Information** is a broader term which not only includes facts and figures related to a particular area but also includes specially selected or prepared materials related to a specific problem at a special time. Information is the heart of the Management process and it is a two way operation, i.e. it is both a giving and receiving process. It is the basis of all other functions within management.

6. The need for information is always there at all tiers of the hierarchical set up. They may vary at various levels for various purposes. Policy makers need information on the extent to which the education system achieves policy goals, analysing the factors which reveal disparities of different types, economic aspects and attempts at evaluation or at costing alternatives in education. Administrators cannot run sound administration without reliable, up-to-date and comprehensive figures describing the sector of education that is being administered. Since administrative function consists of evaluating programmes and planning for the future, in

\*Director, Management Unit for Study and Training, Education Department, Govt. of N.W.F.P., Peshawar.

terms of goals set by policy makers, the administrators need information with this diagnostic planning purpose in mind. They also need information about the rules and regulations governing their administration. Planners need information about the policy directives, goals, objectives of the Education System, resources available within the Education System, and outside the system, the different alternative uses of the resources and the feedback information to plan for the future. Teachers need information about the teaching methods and contents in specific subject areas available instructional materials in both text-book and individual aid forms and statement of policies, objectives and procedures in the system. Students continuously need and use information at the very substance of learning. They learn new skills and knowledge. The research workers need information with respect to research itself, the trends, methods and results. Parents need information about education, about the objectives of the system various options it may offer, subject matter and some acquaintance with the skills of teaching and learning. Public in general need information about education to participate in the educational development more effectively. Community involvement and participation is the latest trend in most of the countries of the world.

7. Systems is a functional unit or a set of elements joined together for a common objective. A sub-system is a part of a larger system which we are concerned. For our purpose the Department/Ministry of Education is the system and its parts, the Directorate of Colleges and Schools etc. are the sub-systems. With the help of high automation and joining together of sub-systems in a scientific computerized operation it is possible to apply to system approach to educational management. In other words the concept of MIS is therefore optimizing the output of the Department by connecting the operational systems through the medium of information exchange.

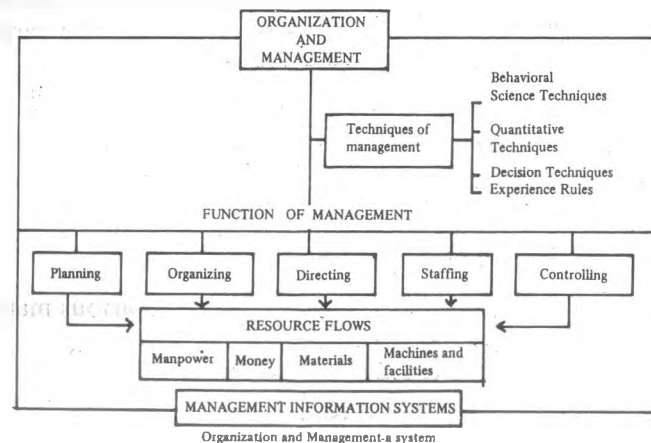

The objective of an MIS is to provide information to the concerned officers for decision making on planning, initiating, organizing and controlling the operations of sub-systems and to provide a synergistic organization in the process.

## What is MIS?

8. Keeping in view the seven problems identified above and the definitions of Management, Information and System it is now necessary to understand what MIS means in management sciences. MIS is functional unit which is capable for providing all information to Managers, required for their decision-making role at the time WHEN they NEED it and in a form which AID their UNDERSTANDING and thus stimulates ACTION.

9. Information System constitutes a linkage channel between problem solving and a data bank meant to store and supply information to people according to their needs. Thus MIS is to aid the Manager in making timely, accurate and informed decision. Logical decision-making requires an understanding of the circumstances surrounding an issue and knowledge of the alternatives available. Thus the more pertinent and timely the information the better the resulting decision.

10. It may be stressed here that term MIS is not new – only its computerization is new. MIS existed long before the advent of computers because MIS techniques existed to supply administrators with the information. With the introduction of computers new dimensions have been added to MIS such as speed, accuracy, and increased volume of data with the virtue of which a number of alternatives could be considered in a decision. Since decision making is the key element of management process, the purpose of an MIS is to facilitate decisions necessary for planning, organizing, directing and controlling the work of the Department.

The above model is an envelope called MIS. It encloses the entire machinery of management and has been shown as an integral part of it. This component collects data, stores it, analyses it and displays it to decision makers at all levels for management of the resources, flow of materials, manpower, money, and facilities. MIS is also vital to the practice of the function of management.

#### D. FEMIS

11. The Education Department, Govt. of NWFP, with the assistance of UNDP initiated a research project entitled "Reform Educational Administration in the Provinces" in order to find ways and means to overcome the problems highlighted above. Project's main concern has been the following:

- To experiment and establish a computerized MIS in district Mardan
- To train the officials of the department in modern management practices
- To analyse the various tiers of administration in the department and develop job manuals
- To codify rules and regulations for the purpose of ready availability

12. In the following paras an account of FEMIS has been given. In the traditional set-up the flow of data and its collection pass through many stages, and data takes 1-1/2 to 2 years to ultimately get converted into files and registers of the Education Department. Under the reforms project an effort was made to cut this path and collect data relevant to the needs of managers, in a shortest possible time. This scheme is given in the diagram. The various stages involved in the process are the following:

- Developing Questionnaire
- Training of Data Collectors
- Data Collection
- Data Entry and Verification
- Updating the Data Base
- Programming
- Determination of Specific needs of various managers
- Designing of MIS output
- MIS simulation exercises
- MIS out-put and feedback

#### No. I

*13. Development of Questionnaire:* In the previous paragraph we have seen that the key level role of MIS entirely depends on the Information Stages. The more relevant is the data the more efficient will be the MIS. Accordingly great care has to be exercised on the decision that what type of data needs to be collected. To be more specific we quote a rule. "To decide which information is not to be collected". This decision needs to be made collectively by representatives of all levels of MIS as indicated in the diagram e.g. the planning officer, the budget men, the curriculum designer, representatives of inter related Sub-System etc. In case of FEMIS the exercise was carried out in a period of 3 months by administrators, planners, computer consultants, foreign consultants, who actually identified the needs of various levels of Education.

#### No. II

*14. Data Collection:* After the number of institutions to be covered has been clearly identified, it is important to decide on the time to be allocated for data collection exercise. Accordingly a group of willing, energetic and motivated young persons from the institutions have to be very carefully selected for imparting them the skills and techniques required for the collection of data for the computer. They may be deputed on TA/DA basis for this task or some alternate way has to be sought in order to minimise the chance of the Data Collector spending more time in the field for earning more TA/DA. A workable solution to this issue could be probably be allotting the institutions for data collection on contract basis, which is recommended by FEMIS.

The Data Collectors are assigned schedule for data collection. In order to check the reliability and accuracy the Data Collection has to be monitored regularly.

#### No. III

*15. Data Entry:* After the data has been collected from the field and brought into the Computer Centre it acquires a huge voluminous size. It then becomes necessary to arrange it according to the set up of data entry strategy. This arrangement could be in

alphabetic sequence of the school name or sex wise distribution etc. The data entry accordingly commences and it takes patience and perseverance to accomplish this task. It has been found on the FEMIS experience that 250 Records of 12% Characters (thus making ten primary schools can be entered in a working) on a single terminal. The same effort is required for verification. The speed can be doubled by double shifts and employing more terminals. FEMIS with two terminals partly available for data entry is proceeding with the same speed. The data is usually stored on magnetic tape, disc and diskette. Diskette is a handy way of data storage. It resembles a gramophone record and can store an enormous amount of data.

#### Step No. IV

16. *Institution Directory*: Institution directory plays a vital role in retrieval of information on a particular institution. It has computer code number and the full address of the institution. Analogous to this directory would be a telephone directory.

#### Step No. V

17. *Updating the Data Base*: With the passage of time the data loses its validity and reliability. In order to inject these characteristics in the data it is imperative to keep it up-to-date and fresh at appropriate intervals depending upon the life span of a particular piece of information related to planning, management etc.

#### Step No. VI

18. *Identification of needs*: After the data base has been completed all responsible persons in the sphere of MIS are brought together for a conference on the pattern of questionnaire design. They spell out in specific terms their needs in terms of long-term and short-term requirements and also indicate the time period when they would be needed.

#### Step No. VII

19. *Management Reporting System*: In the light of Step-VI, System Analyst and Programmer analyse the above requirements

and base it on a general design. The Programmer writes step by step instructions for the Computer. It may be mentioned that programming is the process of writing instructions in a specific programmable language like DE/RPG, FORTRAN, COBOL, ASSEMBLER etc. FEMIS is utilizing a small IBM Computer System 5280 which is operationable with DE/RPG.

#### Step No. VIII

20. *Simulation exercise*: It is difficult to interpret and diagnose computer processed information unless the administrators are closely associated with it at its various stages. Thus skill needed for using computer based information for decision making and problem solving are to be imparted to the decision makers. Main objectives of the simulation exercise would be to equip the administrators with the diagnostic techniques of computer based data so that they make best use of the MIS output report.

# RELEVANCE OF THE OUTPUT OF HIGHER EDUCATION SYSTEM TO THE REQUIREMENTS OF THE ECONOMY

(Paper presented by Dr. Abdul Ghafoor, Deputy Chief, Manpower) Section, Planning Commission

## INTRODUCTION

Education plays a significantly important role in the socio-economic and political development of nations. Most of the empirical studies conducted by scholars and researchers reveal that there is a positive relation between the level of educational development and socio-economic development of the respective nations. The higher the degree and level of education, the higher will be their level of socio-economic and political development. For that reason most of the under developed, developing and developed nations attach great importance to the advancement of education. However, it depends on the resource capacity of a nation as to how much they can invest in education for the formation of human capital. More developed countries spend a large proportion of their GNP on education; whereas in Pakistan it is less than 2%. The level of investment in education as compared to other countries with similar status of development is quite low. UNESCO recommends 4 % of the GNP for education in the developing countries. Thus it is quite obvious that our investment in education is even less than the desirable norms for a developing country.

When we talk about education, we refer to various streams of education, i.e. primary, secondary, and tertiary. All these streams have their own significant contribution and cannot be isolated from one another. Investment in one stream may require additional investment in another. To be more specific, one level and stream of education reinforces qualitative improvement and quantitative expansion of another. Each stream and level of education requires in-depth analysis which we are not in a position to undertake because of time constraint. The focus of this presentation is intended to be on relevance of the output of higher education system with the requirements of the economy. But before we enter into straightforward analysis of the problem, it would be desirable to highlight the objectives and status of higher education in the country.

## OBJECTIVES AND STATUS OF HIGHER EDUCATION

In textbooks as well as in government policy statements one frequently

find elaborate lists of educational objectives formulated in different ways. They vary in both content and emphasis. But there are three main aims of education which are invariably listed in one form or another. They are: (a) the mental, emotional, spiritual, and physical development of the individual and his adjustment to society; (b) the economic viability of the individual and (c) the maintenance of the cultural identity of the society to which the individual belongs. These objectives can be classified into political, social, economic and pedagogical objectives.<sup>1</sup> Our main concern here is the economic objectives of higher education which include both college and university education.

According to the National Education Policy, the aims of education are to impart quality education; to develop fully according to the capacity, each individual's potentialities, through training and re-training; to develop the creative and innovative faculties of the people with a view to building their capability to effectively manage social, natural, and productive forces, consistent with the value system of Islam. It further provides that the objective of education is to promote and strengthen scientific, vocational, and technological education, training and research in the country and to use this knowledge for socio-economic growth and development thereby ensuring a self-reliant and secure future for the nation.<sup>2</sup> There are a number of other objectives listed in the policy, but for the sake of this presentation, we restrict ourselves to the following specific objectives.

In the context of higher education, the National Education Commission appointed in 1958, observed that 'The education system in the country, specifically at the university level should pursue quality as an essential objective, and its end-products in arts and science should be comparable in competence and achievement with those trained in advanced education systems of the world.'<sup>3</sup> The reason for such an emphasis was the leading role of colleges and universities in the development of leaders in all fields of national endeavour. Quality of education has been the constant source of concern for the policy decision makers and planners ever since the inception of Pakistan. Deterioration in the quality of education was quite obvious keeping in view the quantitative expansion of the education system.

As far as quantitative expansion of higher education is concerned, there were 40 arts and science colleges in the country with total enrolment of 14,000 students during the year 1947-48. The number of colleges has gone up to 544 during the year 1981-82 with total en-

rolment of 327,000. These figures have been taken from Pakistan Economic Survey 1978-79 by putting together the figures of professional and general degree colleges. At the time of independence in 1947, there were only two universities in the country which has gone up to 18 by the year 1981-82. Though the number of colleges and universities was increased, yet the distribution of courses remained static. According to Jozefowicz 'The professionally oriented component of the present educational output is far too weak to bring about radical change in the occupational structure of working manpower. The present system has to duplicate the existing educational pattern, adds to already overcrowded trades and fails to satisfy demand for scarce skills.'<sup>4</sup> This situation has been further confirmed by the Fifth Five Year Plan which states 'The number and pattern of educated unemployed coupled with shortage of skilled workers is a manifestation of the imbalance in the education system. The major source of this malady is the preponderance of students studying art subjects.'<sup>5</sup> The Plan further specifies out the percentages of students in the art streams. According to the Plan, the percentage of students in the arts stream were 53, 60 and 65 at intermediate, degree, and post-graduate levels respectively. The Plan has also expressed concern over the high percentage of failures in public examinations and the deteriorating standards of education.<sup>6</sup>

In order to strike a balance between various streams of education the plan proposed following percentages of additional enrolments at intermediate and College levels:—

<u>Faculties</u>	<u>Intermediate</u>	<u>Degree</u>
Arts	22 %	23 %
Science	49 %	36 %
Commerce	11 %	10 %
Agriculture	3 %	—
Home Economics	3 %	3 %
Education	12 %	28 %

From the above it will be observed that the Plan provided certain guidelines for the educational institutions for restrictive admissions by various faculties of higher education. We are not quite sure as to what extent the educational institutions were taken into confidence to implement such decisions. Formulation of Plans and their implementation are

distinct aspects and as such the Plans could be meaningful only when they are properly implemented. We do not have time series data of the Fifth Five Year Plan regarding enrolment in various faculties. However, the University Grants Commission has provided data for two years, i.e. 1980-81 and 1981-82 of the Fifth Five Year Plan. On the basis of enrolment data provided by UGC, the following table has been constructed as to show the percentages of enrolment in various faculties:—

<u>Faculties</u>	<u>1980-81</u>	<u>1981-82</u>
Art	28.6	31.7
B. Admin	6.0	1.9
Commerce	6.1	6.9
Education	4.8	5.3
Law	12.2	13.2
Science	28.9	29.2
Pharmacy	3.3	4.4
Languages	1.0	—
Others	8.8	7.1

From the above it appears that the proportion of enrolment in the faculty of arts instead of declining has gone up. In the field of business administration, the declining enrolment percentage cannot be accepted as the figures seem to have been reported under some other faculties. There is a slight increase in the percentage enrolment in science faculties. This is the situation which is prevalent in the general universities. As regards degree colleges, upto-date data is not available. However the data for the year 1977-78 reveals that enrolment in arts and science faculties was 81 and 19 % respectively. We are not quite sure about the shift from arts to science subjects which had been the emphasis of the Fifth Year Plan.

#### **ENROLMENT AND OUTPUT OF THE HIGHER EDUCATION SYSTEM**

The Fifth Five Year Plan compares the enrolment ratio of higher education with countries like Iran, India, Indonesia, England, and Democratic Republic of Germany. The Plan admits that in absolute terms enrolment in higher education per 1000 population in the country is far from satisfactory. It says that 'there are proportionately more

students at the third level than in many developing and even some developed countries. Of the total enrolment in the entire education system, 4.2 % are enrolled in colleges and universities as against 1.3 % in Indonesia, 1.7 % in Iran, 1.8 % in India, 4 % in England and 4.1 % in Democratic Republic of Germany'. We cannot afford to challenge the figures reported in the Fifth Five Year Plan. However, if we analyse the structure of our education system and its enrolment in various streams of education, we may find that the percentage of enrolment against specific school age population is very low. In this connection Hafiz Paracha and his associates have provided comparative perspectives of enrolment during the years 1951, 1961, and 1972. Their findings are given in Annex. 1. The percentage of enrolment as compared to school age population are reproduced below:—

Year	Primary	Secondary	College	Universities
1951	25.0	6.8	0.8	0.2
1961	31.8	16.4	2.0	0.6
1972	39.4	16.8	3.4	1.1

These percentages indicate that though there had been increase in enrolment ratio in the primary education, college and university education, there had been no significant increase in the stream of secondary education during the period 1961 to 1978.

It is difficult to establish the degree of consistency between the figures of enrolment of various universities provided by UGC and those of Pakistan Economic Survey. The only faculty for which these figures can be compared is the faculty of law for which the enrolment figures for the years 1980-81, and 1981-82 are available in the statistics compiled by the University Grants Commission. It has been observed that the total enrolment in faculty of law during the years 1980-81 and 1981-82 is of the order of 4134 and 3922 respectively. The figures given in the table above seem to be quite on the high side. Based on this, we may hypothesise that the estimates provided in the Pakistan Economic Survey are inflated ones and cannot be relied upon for undertaking any meaningful analysis.

No authentic data with regard to the output of the education system for the plan period is available. However the estimated figures

put at the secondary and post secondary level have been provided in Pakistan Economic Survey 1981-82. These estimates for the post-secondary levels of education are reproduced below:—

### OUTPUT OF EDUCATED PERSONS FROM COLLEGES AND UNIVERSITIES

Year	Inter (000)	Degree (all subj.)	MBBS	Master (all subjects)	L.L.B.	Total
1977-78	48.4	41,669	1940	7332	3302	102,643
1978-79	50.4	45,589	2000	8015	3916	117,920
1979-80	72.0	49,509	2060	8698	4530	136,797
1980-81	78.1	53,429	2120	9381	5144	148,174
1981-82	84.2	57,349	2189	10064	5758	159,560

Source:— Pakistan Economic Survey 1981-82, p.182.

We are not quite sure as to what percentage of graduates from Intermediate Colleges continue their education to degree level; or what percentage having passed bachelor, continue to master degree level. At the same time we are not sure as to how many intermediate, bachelor, master level graduates join the labour market for seeking employment. For determining the flow of students at different levels of education we can resort to cohort analysis, but because of deficiencies in data and the time constraint, it is not possible at this stage to determine the stock of educated human capital as well as strategic human capital. If we had been able to get a report of the 1981 census, the problem could have been partially resolved. Having discussed the short-comings in assessment of the magnitude of educated human capital, now we have to turn our attention upon the problems of their employability.

### EMPLOYMENT OF STRATEGIC HUMAN CAPITAL

The word strategic human capital has been used earlier which needs to be further elucidated. This term has been used by Harbison and Myers for such personnel who fall under the categories of entrepreneurial/managerial/administrative personnel; professional personnel such as scientists, engineers, architects, agronomists, journalists, artists, etc.; qualified teachers, and sub-professional technical personnel. This means

that those having gone through the process of higher education fall under the strategic human capital. Human capital refers to all the stock of human resources on the basis of educational attainment. Thus the product from the education system falls under the strategic human capital. Now the question arises as to how this strategic human capital is being utilized.

According to the Labour Force Survey 1978-79, the illiterate constituted 68.87% of the labour force; whereas the literates were 31.12%. The percentage distribution of intermediates, bachelor degree holders and those having post-graduate education in major occupations is given in the following table:—

**PERCENTAGE DISTRIBUTION OF EMPLOYED PERSONS 10 YEARS AGE AND ABOVE BY LITERACY AND LEVEL OF EDUCATION AND MAJOR OCCUPATION GROUPS**

Major Occupation Groups	Total employed		Inter but less than degree	Degree but less than Master's
	Illiterate	Literate		
Total	68.87	31.12	1.80	1.26
Professional, technical and related workers	.30	2.74	.38	.46
Administrative and managerial workers	.05	.67	.10	.19
Clerical and related workers	.19	2.72	.56	.30
Sales workers	4.89	5.22	.29	.15
Service workers	2.90	1.70	.03	.02
Agricultural, Animal Husbandry and Forestry workers, Fisherman & Hunters	42.85	9.78	.19	.04

By applying these percentages on the projected stock of human capital (based on 1981 census) we can roughly estimate the size of human capital employed by level of education. The most important thing in this exercise is the availability of stock data which is unfortunately not available. Now the question is as to what are other alternative sources of data. An attempt has been made to compile the figures of employment exchanges reported in the Quarterly Statistical Bulletins of the Statistics Division for the year 1981-1982. The following table has been constructed to show the employment situation.

**PERFORMANCE OF EMPLOYMENT EXCHANGES DURING 1981-82**

Level of Education	On live register at the end of the year and those registered during the year	Placed in employment	Percentage of total applicants
Total	395,737	61,716	15.6
Total illiterates	87,950	18,491	21.0
Total Literates	307,787	43,225	14.0
Below Matric	119,180	18,711	15.7
Matric	121,409	15,089	12.4
Matric and post-matric diploma holders	40,261	5,959	14.8

4. Matric and post-matric diploma holders	6,602	1,069
5. Polytech:graduates	3,717	454
6. Graduates	15,023	1,820

The employment exchange service has been rendered ineffective as the employers both in the public as well as private sectors have resorted to direct recruitment. We are not quite sure as to what extent their reporting is reliable as they have been reporting inflated figures because of fear of reprimand from their superiors by showing actual figures which are usually low. Anyhow the data presented in the table is indicative of the fact that the graduates have been visiting the employment exchange in desperation as they could not find other avenues to seek employment. But it would be unrealistic to rely on the figures of employment exchanges, as the graduates having registered themselves with them might have secured employment through direct contact with the employers. We have no other alternative but to endorse the findings of Hafiz Pasha and his associates when they say: "It appears that secondary school leavers and not university graduates (with general degree) are having the greatest problems in finding employment. The open unemployment rate for the former is almost 6% and if we include

component of under employment it could rise to 7-8%. Secondly, the rate of unemployment of professional degree and diploma holders is very low at 1½%".

Sanyal has made quite valid observations regarding the constraints in which educational and manpower planners are operating. According to him: "The authors of higher education have been handicapped by the problems of the operation of the employment market which is of a very changing nature. It has been difficult for them to assess the absorptive capacity of the economy, due to difficulties in forecasting manpower needs. There are data constraints like (a) the resource potential of the country; (b) the changing technology and labour productivity; (c) educational needs for different kind of jobs; (d) occupational mobility; (e) attitudes and expectations of the potential employees and employers; and (f) the recruitment and promotion practices of the employers. Even if such information were available, economic uncertainties would still prevail."

The depressed demand for educated manpower inherent in the organizational structure of Pakistan's economy is the most important cause of unemployment among educated youth. Some of the salient features of this feeble demand have been listed by Jozefowicz which are reproduced below:—

- Pakistan's economy is dominated by a large 'traditional sector' characterized by small establishments and self employed category of personnel, and generating negligible demand for educated and skilled manpower.
- Demand for educated manpower is confined to the small modern sector which has been defined as those establishments employing 20 or more workers. Even in this sector the number of large establishments is very small which affects adversely the already depressed demand for educated manpower.
- Leading sectors of the economy, i.e. Industry and Agriculture, reveal a very low proportion of skilled and educated manpower. Manufacturing industries are becoming capital intensive minimizing demand for employment of the educated manpower.
- Economic growth has not generated a proportionate demand for educated manpower and the supply of educated manpower has outpaced the growth of employment opportunities.

The causes of unemployment among educated youth are de  
rooted in the economic and social conditions of an early stage of  
economic development, and deterioration of the present situation is il  
table until serious and lasting efforts are made towards moving a  
from this early stage of economic development. Educational ref  
will only improve quality but quantitatively the situation will no  
prove. The solution of the problem will need a higher rate of econ  
growth, and a rapid pace of industrialization alongwith educati  
reforms. Future expansion of educational facilities should therefo  
made within limits of effective employment demand and as such  
ed procedure of planning adopted whereby economic planning  
coordinated with social planning.

The unemployment of educated youth is not only faced by P  
tan but also by numerous other countries of the world including  
most advanced ones. In free societies it is the right of each individ  
pursue the vocations of his/her own interest. The decision with re  
to restricting admissions may not be the right choice as it is prep  
with students unrest leading to economic disturbances. Even if  
decisions are made they may not be properly implemented due to  
and political pressures on the educationists and administr  
Commenting on a paper presented by Dr. Hafiz Pasha in a Nats  
Conference on Employment Planning and Basic Needs in Pak  
Dr. Baqai made some valid observations. According to him: "re  
restriction of higher education in the name of quality, would see  
freeze the scarcity rents. Artificial barriers are already created th  
differentiation between urban-rural, English – Vernacular, Priv  
Government institutions, which hinder competitive entry into th  
market – especially in its more prized sections."

# NOTES ON THE WORK OF THE ACADEMY OF EDUCATIONAL PLANNING AND MANAGEMENT

(Dr. K. St. Clair Luqman, Adviser, Academy  
of Educational Planning and Management)

## I. THE ACADEMY

### Objectives:

The objectives of the Academy include the following:

- Organizing action oriented research programmes on problems of educational planning, administration, supervision and research and evaluation;
- developing training programmes for different categories of personnel in educational planning, administration, supervision, research and evaluation;
- organizing conferences and seminars on various aspects of educational development for different interest groups such as decision-makers, high level government officials, academicians and research scholars;
- co-ordinating training, research and evaluation functions of other agencies concerned with educational development at the national and provincial levels;
- serving as a clearing-house for information and literature on educational planning, administration, supervision, research and evaluation.

### Staffing and orientation of the Academy:

The Academy operates as a semi-autonomous body under the Ministry of Education. It is recruiting a high-level multi-disciplinary team of specialists in fields related to educational planning and management, and these specialists will constitute a faculty.

Note: A draft 5-year Work Plan was submitted to the Seminar as an annex to the paper.

The range of specialist skills represented in the Academy will, as far as possible, include the following:

- Human resource economics (manpower, costs and financing of education)
- Management information system
- Educational planning
- Management/Administration
- Social survey
- Curriculum evaluation and examinations
- Supervision and teacher education
- Physical resource base
- Technical/vocational education

Experts in these fields have been selected for the 3 Grade-20 and 3 Grade-19 posts. They will be responsible for designing research and training programmes relating to their special knowledge, but are expected to become fully knowledgeable about all Academy work, both for cross-fertilisation of ideas, and also because they can then represent the Academy as a whole in their travels about the country.

The Grade-18 officers (8) will in some cases bring specialist skills to the Academy; in others they will have general skills in the area of educational planning and management. They will have special responsibility for organizing/coordinating workshops and other training activities.

The activities of the Academy will be problem-centred, and there will be an emphasis on action research. As regards training, there will be a need to develop a wide variety of training courses and assess their relative cost-effectiveness. Some training courses will be developed specifically for the Academy. Others will be developed for later dissemination to the Provinces, notably where there are large numbers of potential trainees (e.g. school principals).

#### Co-operation with the Provinces:

The Academy will work closely with Provincial units/cells operating in fields relating to educational planning and management. The mechanism for the cooperation is to be discussed at the inter-Provincial Regional Seminar and subsequently.

#### Inter-Institutional linkages:

The Academy is to undertake research and training relevant to educational planning and management. Though semi-autonomous, it will therefore need to build linkages with many institutions/departments/agencies, e.g.:

- Education Secretariats (Federal and Provincial Planning Wings, Field administration and Establishment/Personnel, etc.)
- Externally-financed Education Projects
- Planning Commission
- Establishment Division
- Ministry of Labour: Manpower Division
- Manpower Research Institute: Training Division
- Institutes of Public Administration
- Allama Iqbal Open University: Institute of Education
- Pakistan Institute of Development Economics, etc.

## II THE FIELD

The field of educational planning and management includes the following areas/processes:—

#### System maintenance (management):

M1 –	Organisational structures and procedures	Matching of education system with requirements for economic and socio-cultural development/well-being
M2 –	Budgeting and financial procedures	Appropriateness of curriculum and examinations
M3 –	Generation and utilisation of information flows	Cost-effectiveness at macro and institutional level
M4 –	Linkage, education and work	Review of system maintenance processes (see M9)
M5 –	Recruitment, deployment and upgrading of human resource base:	Policy and plan formulation
a)	Management/admin/supervisory staff	Planning, programming and budgeting
b)	Teaching force	Project identification, development, monitoring and evaluation
M6 –	Specification, acquisition/production, utilization and maintenance of physical resource base	Plan implementation/management/evaluation, overall organisation of planning work
M7 –	Response to student and community needs and problems	Other
M8 –	Support of curriculum and of assessment/certification processes (see P1/PF4.)	The Academy may tackle these various aspects of system functioning to the following modes of operation:–
M9 –	Policy review, policy/plan/project/programme formulation/implementation, and management of innovation (see P1 to P6).	1. Problem-related research, including action research
M10	Other	Research related to training
System development (through the Plan process and curriculum development):		1. Training activities of many kinds
P1 –	Review of system performance (achievement and inadequacies)	2. High-level seminar/workshops
PF1.	Overall qualitative aspects	Coordination activities
PF2.	Distributional aspects (lessening of regional and income based disparities, and provision of facilities for girls and men)	Information clearing house
		The sub-sectors of the education system may each be analysed in the terms viz :–
		1. Schools
		2. Teacher education

3. Technical/vocational education
4. Examination boards and high education
5. Non-formal education
6. General (combinations of these)

A five-year work-programme based on the above areas of study, function and modes of Academy action will be presented at the Seminar.

### III. NEW PERSPECTIVES

The Academy has been set up with high hopes that it can transform the education system and dynamise it. It cannot do this using the existing discipline of educational planning and management alone. This is because most institutions in this area have been relatively academically otherwise cut off from close contact with the education system, its administration and management. The Academy has therefore to develop new approaches or fail.

This does not mean that the conventional exercises should be neglected. They define the challenges for which remedies are sought within the framework of operations developed:—

#### (a) Macro-studies

- the dimensions of the education system; distribution of resources/problems/access of underprivileged groups;
- costs and financing;
- relation to employment opportunities; etc.

Also analysis of past plans and their outcomes;

#### (b) Micro-studies:

- Problems: past attempts to solve them, and their outcomes; present situation; range of possible solutions and their resource requirements

If the Academy is to serve as the engine of transformation of the education system so that it serves more adequately the needs of the students as well as society, then something more is required, viz. *action-research*, to discover a new socio-technology of educational planning and management that can revitalise dispirited teachers and educational managers, that can use expansion as the opportunity for improvement, so on.

The following strategies are suggested as having the potential for achieving a breakthrough and may be developed conceptually in 1983, 1984 leading to field operations thereafter:

Teacher education and schooling:

**Teacher education and schooling:**

**Establish:** Academy Field Stations at selected teacher education institutions

**Assist:** With their planning and management to achieve:

- (a) Revitalisation of teacher training
- (b) Revitalisation of schooling in adjacent area

**Use:** The Field Station for *in-service training* of other teacher educators, educational administrators and principals, in new approaches to educational planning and management

**Budget:** Providing additional inputs needed to achieve this on an *action research* basis

**Administration and schooling:**

**Establish:** Academy Field Stations at selected District Education Offices

**Assist:** With their planning and management activities to achieve:

- (a) Revitalisation of administration
- (b) Revitalisation of schooling in con District
- (c) Efficiency in budgeting, project for tion and Plan Implementation

**Use:** The Field Station for in-service train District administrative staff as well a school principals

**Budget:** Providing the inputs needed to achieve an *action research* basis

**3. Certification and textbooks:**

Establish Field Station in an innovative Board, etc.

**4. Special Implementation Programme/non-formal education:**

Establish Field Station (s) as appropriate.

**5. Vocational/technical education:**

**Establish:** Field Station in selected institutions

**Assist:** With their educational planning and ment, and provide needed inputs to ac

- (a) Revitalisation of studies (theory, tical)
- (b) Relevance to world of work
- (c) Assistance with and tracer stud placement

**Use:** The Field Stations for *in-service train college principals and educational admi tors*

**Costs of education:**

**Establish:** A mobile Field Station specifically to coordi nate all field activities relating to costs and to low-cost *versus* conventional *versus* enriched resources; and to undertake vigorous analyses of cost-effectiveness.

**IV. DEVELOPMENT OF EFFECTIVE TRAINING METHODS**

It is well known in educational and management circles that a per son who has just been given skills and enthusiasm in a training course may fail to live up to his good intentions when placed in or returned to conservative or restrictive institutional situation. For this reason much training vanishes from sight. Training courses are likewise thought of as relaxation or as a means to a promotion rather than as leading to a change in one's behaviour. The Academy does not plan to waste national re sources in this fashion.

For this reason Academy training will normally be designed to co- cide with a *change in* the work-situation. This may be attempted in different ways, and their relative effectiveness will be evaluated:

- (i) Train a *working-group* together – on site or at Academy
- (ii) Give the training *on a recurring basis* or with strong follow-up so that the trainee knows that he has to report back to his training group/tutor.
- (iii) Give training at the same time as a policy change or change in resource inputs, so that *earlier difficulties are lessened*
- (iv) Give a *long apprenticeship-style training* and keep in close touch after trainee returns to his previous work situation (this time the trainee may change the work situation or his percep tion of it himself).

Training near the work place, on a recurring basis, has a good po tential for effectiveness, and low relative cost. It will, therefore, be ex plored to the full by the Academy. High level short-term seminar-work shops would normally be held at the Academy.

Sub-Provincial:

Pilot Projects

## **VI. INFORMATION CLEARING HOUSE**

The Academy will serve as a national information clearing house through seminars, including perhaps an Annual General Seminar, through publications and documentation centre, etc.

## **VII. RELATION OF ACADEMY'S INITIAL PROGRAMME TO VIth PLAN**

The Academy's work will begin as the VIth Plan is finalised. Its management training activities and training for planners should, Insha'Allah, substantially improve the capacity to implement this plan, in which increased priority is given to the education sector. The Academy through its field studies and action-research should moreover be able to provide valuable feedback on progress or bottle-necks in plan implementation, with suggestions for appropriate action.

'Assessment of training need' is a controversial subject. Capacity to absorb training can be anything upto 100% of working time. The question is rather *what* the Academy can usefully offer.

Nevertheless it may be confirmed that the Academy will develop workshop training modules and supplementary materials corresponding to each category of field administration staff, to planning staff and selected secretariat staff; plus other trainee categories. These materials will be developed on a trial basis and refined in the light of exact evaluation studies. A comprehensive range of modules and case studies will be in good shape after 2-3 years, plus data and guidelines on their use.

## V. COORDINATION

The Academy is expected to give leadership and coordination in respect of the training, research and evaluation aspects of educational development activities of various kinds (see objectives, above). Academy staff should thus at the least be aware of, and at best coordinate, with, activities of agencies such as:-

<b>National:</b>	Education Ministry — National Education Commission
	— Special Committees
	— Planning and Project Wing
	— Curriculum Wing
	— University Grants Commission
	Planning Commission
	Ministry of Labour — Manpower Div., Pak Manpower Institute
	Open University — Institute of Education & Research
	Pakistan Institute of Development Economics

Other

**Provincial:**

Education Secretariats

Planning and Development Committees

Extension Centres

Curriculum Centres

National Institutes of Public Administration

Universities/I.E.R.'s

Employment Secretariats

Other

**Sub-Provincial:**

Pilot Projects

## VI. INFORMATION CLEARING HOUSE

The Academy will serve as a national information clearing house through seminars, including perhaps an Annual General Seminar, through publications and documentation centre, etc.

## VII. RELATION OF ACADEMY'S INITIAL PROGRAMME TO VIth PLAN

The Academy's work will begin as the VIth Plan is finalised. Its management training activities and training for planners should, insha Allah, substantially improve the capacity to implement this plan, in which increased priority is given to the education sector. The Academy through its field studies and action-research should moreover be able to provide valuable feedback on progress or bottle-necks in plan implementation, with suggestions for appropriate action.

## SECTION D

Discussions of the Working Groups  
A Review of the Working Group Reports

## A REVIEW OF WORKING GROUP REPORTS

The participants were divided in four groups and invited to suggest delines for the Academy with respect to:

- i) Training
- ii) M.I.S.
- ii) Coordination
- iv) Research

The recommendations of each group are as under:

### Training:

A group of five educationists was formed for the training function under the chairmanship of Mrs. Shamas Abbasi, Director, Bureau of Curriculum Development and Extension Centre, Sind. The group discussed the aims of the Academy as laid down in the PC I Form in respect of training, i.e.

“developing training programmes for different categories of personnel in educational planning, administration, supervision, research and evaluation”.

The training needs of the various categories of officers in the Education Service were reviewed. A clientele of about 800, from the District level upwards was identified for the Academy's training programmes. The group recommended the Academy to:

- i) organize training courses for this clientele;
- ii) develop training courses for the next category of personnel, e.g. first line supervisors and headmasters of High Schools.

The clientele for the training courses to be organized by the Academy should be as under:—

- i) All officers working in the Planning Sectors, Cells, Units or

Wings of the Provincial and Federal Education Departments and the Ministry.

- ii) All District Education Officers and other officers comparable to their rank and above, including Principals of Colleges, Directors and Deputy Directors.
- iii) Research Workers from Curriculum Bureaus, Extension Centres, Teacher Training Institutions, Boards of Intermediate Secondary and Technical Education and Text Book Boards etc.
- iv) Master Trainers for organizing training courses for Asstt. District Education Officers and Heads of Secondary Schools. The master trainers may be selected from Extension Centres and Teacher Training Institutions.

It was felt that due to initial teething troubles, the Academy may not achieve substantial results in its first year but for the second year and onwards the group recommends to train about 200 persons each year. For the first year they laid more emphasis on staff recruitment, setting up of a well-equipped library, and holding of seminars and conferences in the field of education.

The report was presented by Dr. Mussarrat Ali Khan and was very much appreciated by the house. The following were the main features of discussion as pointed out by the participants:—

- i) Developing training programmes
- ii) Master training programmes
- iii) Developing the capability in the Provinces
- iv) Training needs to be assessed in a scientific manner

The seminar participants appreciated the report, stating "It is clear in itself and is in accordance with the requirements of the Academy".

Dr. Mussarrat Ali Khan explained that the responsibilities of the Academy as set out in the P.C.I form should include both organizing and developing programmes. The Academy would develop training programmes and organize action-oriented research.

Various comments were offered by the participants regarding

possibility of master training programme. After detailed discussions, it was suggested that the work should be done through various organizations in the provinces. Where appropriate, emphasis should be laid on developing the courses.

The Academy should not be an organ for spoon-feeding at various levels, but the activity of the Academy is to develop capability and self-confidence in the Provinces.

It was also stressed that the Academy staff should go out and see the situation in each Province and study their characteristic features with respect to planning, administration, etc. at each level. The training needs have to be assessed in a scientific manner on this basis.

At the end, Dr. Qazi said, the Academy is now getting organized and has selected its professional staff. They will take into consideration all those aspects which have been discussed and they will develop courses in a manner that will ensure the various training objectives incorporated

### **MIS functions of the Academy of Educational Planning and Management**

The MUST model of Management Information System and the MIS national project which has been developed by the Ministry of Education for the UNDP third-cycle program were thoroughly studied by the committee members chaired by Mr. Habib Khan, Director, MUST, Peshawar. The following conclusions/suggestions were made:

- i. The EMIS project should be implemented by the Academy.
- ii. The group supported the project as developed by the Ministry.
- iii. The Academy should pool together the expertise of national & international consultants for EMIS in the Academy who could cater for the needs of each province as and when asked for.
- iv. The EMIS needs should be determined through a consultative process initiated by the Academy with the object of creating a common core questionnaire for the entire country. The Provinces would ensure that their specific needs were also met.

- v. The Academy should ensure that the information collected correct and it is handled by personnel equipped with the requisite knowledge and skills in the field of MIS.
- vi. The Academy should initiate in collaboration with the Provinces the holding of simulation exercises, motivational and acquaintance workshops on the theme of EMIS for all the key-persons of EPM in the Provinces.
- vii. The Academy shall give it priority.
- viii. The Zanuttini report should be followed as a guideline for the establishment of EMIS.

The participants took keen interest in the group discussion and the presentation was followed by various questions. The discussion was focussed on:—

- i) Common core questionnaire for the entire country
- ii) Coordination
- iii) Statistics at Federal level
- iv) Indicators

Mr. L. Habib Khan explained more fully the MIS functions of the Academy of Educational Planning and Management. He said that in order to enhance the management and decision-making capabilities of the administration, it is essential that they be well equipped with reliable and valid data. He also stressed the importance of quick retrieval of information in the educational planning.

In discussion of computer-based management information system he said that the computer is a modern machine used for electronic data processing, whereas the MIS is used by the administrators for their decision-making. Replying to a question, he said that "Time is money, it is the computer which saves the time". Quick retrieval of information can be had through the computer which helps in timely decision-making.

Dr. Qazi stressed the need for correct, valid and reliable data for planning and administration. He said that in order to keep pace with the rapidly changing world, we can make use of computerised MIS.

At the end, the chairman expressed his feelings that the participants have learnt a lot from the discussion on MIS which can be used as a tool for management, as already agreed.

### 3. Coordination:

This group was chaired by Mr. Abdul Jalil, Deputy Director, Planning and Management Cell, Education Department, Government of Sind Karachi. The following recommendations, were made after discussion on various issues:

#### 1. Areas for Coordination:

The Academy in consultation with the appropriate agencies at the International, National and Provincial levels will identify specific areas for coordination keeping in view its aims and objectives for broad areas, i.e.

- i) Educational research connected with planning and management.
- ii) Training/orientation of personnel connected with planning and management at different levels of administration.
- iii) Collection, compilation and analysis of educational data and statistics.
- iv) Publication, documentation and dissemination of information in relation to planning and management.

#### 2. Identification of organizations/agencies for coordination purposes:

It was recommended that similar approach be adopted for identification of organizations/agencies engaged in activities directly or indirectly linked with the Academy's programme.

#### 3. Coordination Channels and Linkages:

It was recommended that the Academy should have direct communication links with the institutions/agencies in the Provinces but the cooperative linkages with the Planning and Management Units/Cells, the Education Departments in each Province should be developed to the maximum extent and these units/cells be fully informed or jointly involved as appropriate.

Mr. A. Jalil was requested to present his report on Coordination. The discussion was opened and the participants discussed various important aspects regarding the coordination channels and linkages. Light was also thrown on definition, scope and determination of coordination in order to provide a full coordination linkage with other agencies.

It was discussed that the specific areas to be coordinated by the Academy have to be carefully sorted out and the Academy in consultation with the appropriate agencies at the International, National and Provincial levels identify the specific areas of coordination keeping in view its aims and objectives.

Dr. Qazi expressed his appreciation of the report and especially welcomed the keen interest shown by Provincial agencies of planning and management in collaborating with the Academy on a continuing basis.

#### **4. Research:**

This group was chaired by Dr. Anwar Khalil, Director, Institute of Education and Research, Baluchistan University. Problems and role of research in Educational Planning and Management were reviewed at length. The group suggested the following broad functions:—

1. Organization of research activities
2. Training for research
3. Coordination of research activities

#### **1. Organization of Research Activities:**

The following recommendations were made for organization of research activities:

## Applied Research

To carry out applied research in educational planning and management for policy and decision-making at national level independently or in collaboration with concerned organizations.

## Sponsorship of Research

To sponsor research studies by individuals or institutions in cases where:—

- a) a problem for research has been identified by the Academy, which the Academy would, for any reason, like to be undertaken by individuals and institutions anywhere in the country;
- b) a problem for research has been identified jointly by the Academy and any other individual or organization, and the Academy would assign the study to that individual or institution;
- c) a problem for research has been identified by an individual or an institution or organization, and which the Academy would like to be carried out in the national interest.

## Promotion of Research

To provide the Academy:

- a) incentives to individuals and organizations for undertaking research in various ways:
- b) support for documentation such as setting up of a library, publications, etc. and also to disseminate research activities in various institutions and organizations, e.g. through publication of a research journal of international repute.

## Strengthening and utilizing research potentials of research organizations and institutions

- a) The Institutes of Education and Research of various Universities in the country;
- b) Institute of Education and Research of the Allama Iqbal Open University, which is concentrating on high level professional research studies on Educational Planning and Management;
- c) Sections of the Ministry of Education and other departments which engage themselves in research activities from time to time.

v) **Providing facilities of electronic data processing**

Data processing facilities to be provided to individuals and organizations for data analysis.

**2. Training for Research:**

The Academy shall provide short-term training programmes to interested individuals or organizations in various research areas.

They also suggested the following levels of training for the research workers:

- General methods and techniques of research      Initial training
- Area Specific Training (such as on Experimental/Survey studies, etc.)      Secondary level training
- Problem Specific Training (Collection and treatment of data and report writing, etc.)      Special training

**3. Coordination of Research Activities:**

The Academy shall collect research reports from various organizations and will coordinate their activities.

The Group also proposed the setting up of a "National Group for Applied Research in Education" by the Academy for the support

high level applied research studies in educational planning and management, which may comprise of Directors of IER's, National/Provincial research Organizations and research experts of the country.

Various aspects regarding research were presented by Dr. Khalil and members of the group and discussed. Some of the areas specially mentioned were:—

- research in communication systems
- research in the management of people
- research in organization patterns
- research in the ecology of education
- type of ecology in educational institutions

These were beneficial areas in which research studies are needed to help institutions in planning and development.

The significance of any particular research problem is a relative matter. Every society, region or organization identifies its own research topics and priorities according to its own developmental needs.

At the national level, the developmental plans in each country specify main objectives and targets to be achieved during the specified period. Priority for research areas may be suggested in such plans.

At the end, Dr. Qazi thanked the audience on behalf of the Ministry of Education and on behalf of the nascent Academy of Educational Planning and Management. He said that "You people are the architects of this Academy because this is the first activity that we have started in the Name of Allah, and we hope to grow further. I would like personally that such type of seminars should be held regularly".

He thanked all the participants belonging to various Provinces who had whole-heartedly devoted themselves to the work of the Seminar in suggesting, discussing and recommending their valuable view points in various areas.

## OVERVIEW OF THE SEMINAR AND ITS CONTRIBUTION TO THE EARLY STAGES OF THE ACADEMY'S DEVELOPMENT

(Dr. K. St. Clair Luqman, Adviser to AEPM)

This section is a retrospective review of the Seminar and its accomplishments, with some indications of how its deliberations have assisted in the development of the Academy in its early stages.

The Academy has a long history in one sense, since it is an extension of the Bureau of Educational Planning and Management which undertook extensive research and training work in the 1970s. In another sense it is very young, since its present staff was selected by the Inter-Provincial Board in December 1982 and are joining in the period February to July 1983. Several of the present cadre were able to attend the Seminar though it was held in December 1983, and others have subsequently listened to Seminar discussions on tape.

In a very real sense, the Seminar helped to get the Academy off a good start. The high-level representatives from the Provinces were able to offer their support and guidance from the very beginning. This symbolises moreover the fact that the Academy is a service institution designed to make available expertise, information, training and research findings, etc. that will assist the Provinces in their task of educational development.

It was made clear by the Provincial representatives that their planning and management specialists would wish to cooperate to the fullest with the multi-disciplinary team of specialists gathered together at the Academy. In respect of research, the various learning experiences could be shared, while the Academy would have the benefit of their Provincial colleagues' long experience in the particular characteristics and needs of each Province.

In respect of training it was clear that the Academy could bring Provincial specialists together at their convenience to develop new concepts of planning and management through workshops, seminars and training courses in various aspects of educational planning and management. The Academy would, moreover, assist in the development of methodologies applicable for the Province-based training of school and college principals and of junior officers in the Directorates of Education.

The key role of the Academy in facilitating and promoting the flow of information and research in the field of education was emphasised throughout the Seminar.

It may be added as a postscript that administrative delays have held back the start up of the Work-Plan presented to the Seminar. It will be April/May 1983 before the professional staff is in position, the administrative basis established and substantive work begun. A modified Work Plan for the period up to June 1984 has therefore been developed, emphasising the build-up of knowledge and linkages with each Province. Three main features have been selected for attention:

- 1) The planning and management of rural primary schooling,
- 2) The initiation of work on a national EMIS, and
- 3) Review of the process of plan formulation and implementation at macro-level.

During this period, internal training of Academy staff will be an important objective. Nevertheless, research, training, case-material development and enrichment of the information base will be attempted during the initial period, also, as the need for this work is so urgent. A five-year programme of work will also be developed during this period, drawing upon the draft submitted to the Seminar but enriched by Seminar discussions and by subsequent Academy studies.

It is hoped that Provincial representatives and also experts working in Islamabad will support further Academy seminars to offer guidance on the development of these programmes in detail providing a continuation of the impetus, intellectual and motivational inputs derived from their support of the Inaugural Seminar. The Academy's appreciation of this support is re-emphasised here as the most fitting way of concluding this report. May the blessings of Allah rest with all participants of the Seminar in all their work. The prayers of all for the Academy would be much appreciated.

## ANNEXURES

1. List of Resource Persons and Participants
2. Programme of the Seminar
3. Additional papers
  - a) The Special Development Programme (Mr. Abdullah Khadim Hussain)
  - b) In-service Teacher Education in Baluchistan (Mr. Khurshid Ahmed)
  - c) The work of the Education Extension Centre, Lahore (Mr. Abdus Samad)
  - d) Problems in the collection of valid educational statistics in Pakistan (Mr. Shafiq-ur-Rehman)
4. Reports of the Seminar Working Groups
  - a) Training
  - b) MIS Function of Academy of Educational Planning and Management
  - c) Coordination
  - d) Research

Summing up (Director General, AEPM)	12.15	P.M.
Lunch	12.30	P.M.

### THE SPECIAL DEVELOPMENT PROGRAMME

(Extract from tape recording of address given by  
Mr. Abdullah Khadim Hussain, JEA, Curriculum Wing)

The Special Development Programme focuses on rural areas and deprived groups and especially on Primary Education. The Special Development Programme was designed to confront the following problems:—

- i) We have a population of 14 million children who are of primary school age.
- ii) The enrolment including under-age and over-age children is 6.9 million.
- iii) The drop-out rate amongst the children is about 50% in rural areas. Drop-out usually takes place from class 1 to 3 amongst the boys and in class 3 to 4 amongst the girls. The number of schools already existing in Pakistan is not enough.
- iv) Teachers do not use the equipment provided to them.
- v) Students are over-crowded in the already existing schools.

So keeping in view the above mentioned problems, key features of the Special Development Programme will include:

- i) Each school in the Programme will be given some equipment.
- ii) The number of teachers has been increased. For example, in Mosque Schools there will be one trained teacher and one Imam and in whichever school classes one to three are being shifted to the Mosque there will be two more teachers for class 4 and 5 in the school itself. The number of primary school teachers under the Special Development Programme thus averages four.
- iii) Curriculum will be modified and will focus on reading, writing, Arithmetic and Islamiyat from class one to five.

- iv) Supervision. A new dimension in supervision is being introduced, one at the Divisional level and other at the Union Council level. These supervisors will be called resource persons. They are not just the ordinary supervisors but they have the qualification of being primary school teachers with ten years experience. They are up-graded from grade six to eleven which is an incentive for them. They supervise the implementation of the programme and also establish liaison with the community.

Inputs planned in the first phase include:

- i. Opening of 7,500 new Mosque schools;
- ii. Provision of accommodation in the Mosque for 1,500 shelterless schools;
- iii. Construction of 1,000 two roomed school buildings to bring about improvement in the accommodation situation of class IV and V, particularly shelterless schools;
- iv. Construction of 300 class rooms in order to add one more room to one-room schools to provide one class room each for class IV and V;
- v. Improvement in the accommodation and equipment of 2,000 existing schools by using Mosques to accommodate class I-III and to provide equipment and teaching materials for both sections of each school;
- vi. Removing over-crowding in 200 urban primary schools by using mohalla/mosques to accommodate lower classes;
- vii. Opening 300 girls primary schools;
- viii. Improvement of 200 existing girls schools by providing building, equipments, etc.;
- ix. Opening 200 Mohalla schools for girls;
- x. Setting up of 500 literacy-cum-industrial training centres for girls;

- xi. Provision of supervisory units for the proposed expansion programme;
- xii. Provision of Settlement Allowance for female primary school teachers;
- xiii. Provision of School Mapping Programme;
- xiv. Provision of Coordinating Units at Provincial and Federal levels.

#### MOSQUE SCHOOLS

Mosque school does not necessarily mean that the school should be in the mosque but only refers to any readily available accommodation where children can assemble for instruction by the Imam and a trained teacher. If there is already over-crowding in a formal school then classes one to three can be shifted to the Mosque and in such cases the equipment will be provided both to Mosque Schools and formal schools (Classes four and five).

#### MOHALLAH SCHOOLS

There are certain institutions where girls are being taught by a respectable lady who can read and write. Such schools are called Mohalla Schools and these were recognized in the previous policy also. Literacy centres are also being established under the Special Development Programme.

#### SECONDARY SCHOOLS

Availability of science teachers at the secondary schools is very difficult. Scholarships from F.Sc. to M.Sc. are being provided as an incentive. Science equipment is being provided to secondary schools also.

#### ARABIC LANGUAGE

Provision of Arabic language is also being introduced under the Special Development Programme.

As the Education Secretary has mentioned about the innovative

management aspects of the Programme, the implementation of the Programme does not go through formal channels of information and there are certain new techniques applied. In ordinary cases the supervisor has to look after 150 to 200 schools. But under this Programme only 20 schools are included to be supervised by one person. It will vary from province to province. Wherever formal teachers are not available for rural areas because of social-cultural reasons, there the qualification of training and basic education are relaxed. Any girl who is capable of teaching is taken as a teacher at a flat rate of 300 rupees. The small projects under this programme do not have to go through the formalities of PCI and Planning Division. After negotiation with the persons concerned the grant is released. The Special Development Programme is also very flexible in its design and implementation. Wherever the Mosque Schools are not possible community schools are being established, for example.

**REPORT ON IN-SERVICE TEACHER EDUCATION IN  
BALUCHISTAN BY MR. KHURSHEED AHMED  
(PRINCIPAL GOVERNMENT TRAINING COLLEGE, QUETTA.)**

This report is based on the annual report 1982 on the activities of the Provincial Directorate, Bureau of Curriculum and Extension Centre, Baluchistan, hence I seek the privilege of quoting from the foreword to the above said report by Professor M. Anwar Rooman, Director of the Bureau.

It is an admitted fact that the national development and prosperity are dependent on the educational uplift of the individuals of that nation. In education the teacher plays an important role. That is why in the Education Policy, 1979 the teacher has very rightly been named the pivot of the educational system. It is also a fact that no system of education is better than its teachers. We always look to the teacher for the effective implementation of our educational policies. Whenever we try to find out the causes of deterioration of the standard of education we come to the conclusion that not only most of our teachers are untrained, they also lack the required knowledge, imagination and innovation. Our teacher is treading the same beaten track and this attitude of teacher is quite contrary to our national demands. If this state of affairs is allowed to continue our dream to make the education universal will not turn into reality and the acute problem of drop out will remain. As it is luckily the policy of the Government to provide adequate facilities both for pre-service and in-service training programme of teacher education in the Country which is very encouraging and appreciable, hence we should not get disappointed and leave in despair.

Unlike other provinces of Pakistan where thousands of trained teachers are available at P.T.C. and B.Ed level who are still unemployed we are short of trained teachers in Baluchistan. In 1972 the officials recruited by the Government of West Pakistan after 14th October, 1955 were repatriated to the Province of their domicile. As a result, large number of trained and experienced teachers left Baluchistan after creating a vacuum in the field of education. In order to fill the gap they were replaced by raw hands and untrained teachers. These untrained teachers are liability of the department rather than asset as they are deputed for their professional training at the cost of Government. They receive their full emoluments during the period of their training.

After this explanation it would be easier to understand that since 1972 the professional training which is named pre-service in the other provinces of Pakistan is in-service training in Baluchistan.

Thus in-service training of teachers in the province of Baluchistan is two-fold:

### PROFESSIONAL TRAINING OF UNTRAINED IN-SERVICE TEACHERS

We are alive to the need of upgrading the quality of teacher education by providing the adequate facility for this in-service training programme; but unfortunately forced by the need of the day focus lies on the quantitative expansion of teacher education programme rather than on qualitative improvement. At one hand the training institutions are trying to fulfil the urgent demand of trained teachers while at the other the utmost efforts are being made for the qualitative improvement and enrichment of such programmes by adopting modern innovative techniques.

This training programme is launched at five training institutions of the provinces out of which 3 are Colleges of Elementary Education while the nomenclature of the other two is Teacher Training Schools.

They are :—

- i) Govt. College of Elementary Education for Boys, Quetta.
- ii) Govt. College of Elementary Education, Mastung.
- iii) Govt. College of Elementary Education for Women, Pishin.
- iv) Govt. Teacher Training School, Panjgoor.
- v) Govt. Teacher Training School, Uthal.

Out of these Elementary Colleges the former has been equipped and up-graded from the standard of school to the College level in 1980-81 and the expenditure incurred was borne by the provincial Government while the up-gradation of the latter two has been financed by the 3rd Education Project. In Elementary College we have mostly P.T.C. and C.T. classes while at one of these we have Drawing Master Class and P.T.I. Class as well.

418 seats for P.T.C. trainees on the basis of district wise quota are available at all the training institutions out of which 80 seats are purely for female primary teachers at Government Colleges of Elementary Education for Women, Pishin.

Intake of C.T. trainees is 120 out of which 40 seats are for female trainees.

Drawing Master P.T.I. Classes have been introduced since 1977 at Government College of Elementary Education for Boys Quetta.

40 Drawing Masters and 25 P.T.I's are every year deputed for their professional training on the basis of district wise quota. The training is of one year's duration.

100 Senior English Teachers are deputed every year for their professional training of B.Ed. at University of Baluchistan, Quetta. Hence 700 untrained teachers of all categories undergo their professional training every year.

From	1947	upto	1981	58578	J.V. Teachers
From	1962	upto	1981	1460	J.E. Teachers
From	1977	upto	1981	133	Drawing Masters
From	1977	upto	1981	103	P.T.I's.

have been trained by training institutions of Baluchistan. The administrative control of these training institutions is with the Director, Bureau of Curriculum and Extension Centre, Baluchistan, Quetta. These institutions have also been constituted as sub-centres for in-service re-orientation courses and these courses are the joint collaboration of the staff of these institutions and that of the subject specialists of the Bureau.

Government Agro-Technical Teachers Training Centre, Quetta was established in 1976. It is the joint venture of the Government of Baluchistan and that of the Central Government. Every year 50 Agro-tech: Teachers get their professional training at this Institution.

The division of the seats is:—	
Industrial Arts	= 30
Agriculture	= 10
Home Economics	= 10

From 1976 upto 1981, 112 Industrial Art Teachers, 51 Agriculture Teachers and 57 Home Economics teachers have successfully completed their Course at this Institution and are now working in various institutions of the province.

### IN-SERVICE TRAINING OF TRAINED TEACHERS

The main function of the Directorate of Bureau of Curriculum and Extension Centre is to deal with the curriculum and to arrange re-orientation courses for the teachers of all level. Education Extension Centre was established in Baluchistan in 1973. It was later on merged in the Directorate of Bureau of Curriculum and Extension Centre, Baluchistan in 1978. This Directorate duly headed by the Director, Bureau of Curriculum consists of two Deputy Directors of Education, two Assistant Directors and 10 Subject Specialists.

All the Subject Specialists are master trainers. Most of them have specialised in the different fields of education through the courses of short and long duration with the co-operation of National and International Agencies like UNESCO, UNDP, Pakistan Primary Education Project and Pakistan Academy for Rural Development, etc.

All the re-orientation courses are run by these subject specialists under the direct supervision of Professor M. Anwar Rooman, the Director of the Bureau. In fact to the Bureau he is the same which is the soul to the body. Since his posting as Director in 1978, he has actually mobilized the programme of in-service training and it is hoped that in the near future, we shall achieve the target of providing one in-service training facility to every teacher working in the field during every five years.

For the convenience of the participants all these re-orientation courses are conducted at district head quarters or at some important station of the district. For this the resource persons have to go a long way from their headquarters. Some times the services of resource persons other than these subject specialists are also utilized for these courses in order to facilitate a large number of participants.

The objectives of these courses are:—

- i) To re-orientate the massive number of existing teachers in the ideology of Pakistan and in their respective field of specialization.
- ii) To bring constructive change in the attitude of the teacher.
- iii) To enable them to make use of teachers guides in a benefiting manner.
- iv) To enable the primary school teachers to make proper use of the National teaching kit.

From 1973 upto 30th June, 1982, a total number of 3289 out of 5494 primary school teachers have benefitted themselves with the re-orientation courses. Out of this 2752 are male while 537 are female primary teachers.

From 1979 the Bureau offered re-orientation courses for secondary teachers as well. Out of 110 Senior English teachers only 141 and out of 1479 J.E. teachers 521 have so far been accommodated.

Separate courses have been organised for the teachers teaching English, Science and Mathematics to secondary classes. 141 secondary teachers teaching the above said subjects have been re-oriented in the particular subjects.

During 1981-82 main emphasis has been laid on the in-service training of secondary teachers and 10 courses were offered to 234 secondary teachers. During the above said period 127 primary teachers have also been re-oriented through four courses. Courses in the field of Testing and Measurement, use of audio-visual aids, population education and testing and evaluation of Maths, and Science, Master trainer's course for the teachers of training institutions have also been offered. 302 teachers have attended these courses.

Special courses for the use of National Teaching Kit were arranged for Assistant District Education Officer's which were attended by 44 Assistant Education Officers.

### CRASH PROGRAMME

For the last 10 years in the province of Baluchistan there has been shortage of Science Teachers and inspite of the best efforts on the part

of Education Department, this shortage has not so far been overcome. Incentives have been offered to the science graduates belonging to the provinces other than Baluchistan. Very few have offered their services. In order to find out a permanent solution to this problem a crash programme has been launched at the cost of Rs. 4,70,000/- per annum.

Under this programme in-service F.Sc teachers or B.A's who have passed Matriculation Examination with Science subjects are required to undergo two Courses of 6 weeks duration each. In case of their successful completion they are to be appointed Science Teacher and will be promoted to N.P.S. - 14.

Two courses of such nature have already been held. In the first phase of the 1st Course the intake was 34 and 11 out of them were successful, who were allowed admission in IIInd Phase. Similarly 18 out of 24 succeeded in the 1st phase of the IIInd Course. Out of these 29 teachers 28 completed the Second Phase successfully.

Bureau is fully cooperating with the Provincial unit of Pakistan Primary Education Project. Assignment for the preparation of objective Tests for the primary classes was undertaken by the Subject Specialists of the Bureau and Teachers of Training Institutions under the Bureau.

Experts of this Bureau have also trained Master trainers who will re-orientate the Primary School Teachers of 4 districts under primary Education Project.

#### **FOLLOW-UP PROGRAMME**

The teachers during re-orientation Courses learn a lot and they feel in themselves certain urge to make some contribution to the cause of education. In other words through these Courses their whole personality is transformed; but whenever they go back to their Institutions they can not keep alive to their enthusiasm and efficiency which are prerequisites for the exercise of their professional activities. It is due to the fact that we do not have any follow-up programme. Bureau is alive to the situation and has chalked out a certain programme in the light of its limited resources. Subject Specialists while conducting Courses at various stations visit the Primary Schools in the surrounding areas. Some times the Principals of Elementary Colleges also visit some schools but it is felt that all this is insufficient. It may be possible only

when the financial and manpower resources of the Bureau are re-inforced.

#### **INSPECTION FORMAT**

Since long, school inspections are being conducted as a tradition. Conventional methods have proved in-effective as the educational activities of the teachers and the taught were not actually assessed to the extent they ought to be. In view of all these facts the Bureau has evolved an inspection format for the guidance of Inspection Team. This inspection format is liable to further amendments in the light of relevant recommendations of the Inspection Staff.

## THE WORK OF THE EDUCATION<sup>N</sup> EXTENSION CENTRE, LAHORE

(Circulated by Mr. Abdul Samad, Subject Specialist Education Extension Centre, Lahore)

### MAGNITUDE OF THE PROBLEM:

Education Policy: In order to ensure continuous professional growth all teachers will be required to undergo at least one in-service training course during every five years.

	<u>*Total No. of teachers at various levels</u>	<u>No. of teachers to be provided training each year</u>	<u>**Cost for each year (in rupees)</u>
Primary	79533	15906	67,60,305/-
Middle	35408	7081	53,10,750/-
Secondary	35350	7070	70,70,000/-
			<u>Total Cost per year 19.1 million</u>

\*= Actual figures for 1980-81

‡=Rates: Primary teacher @ Rs. 425/-

Middle teacher @ Rs. 750/-

Secondary Teacher @ Rs. 1000/-

Duration of Course = 4 weeks

## ADP ALLOCATIONS FOR IN-SERVICE TRAINING OF SCHOOL TEACHERS DURING THE LAST SIX YEARS

ADP allocations for various levels

<u>Year</u>	<u>Primary</u>	<u>Middle</u>	<u>Secondary</u>
1977-78	36,25,000	32,09,000	12,00,000
1978-79	3,00,000	5,00,000	4,00,000
1979-80	Nil	Nil	Nil
1980-81	Nil	4,00,000	5,00,000
1981-82	3,00,000	2,00,000	2,00,000
1982-83	2,34,000	Nil	3,66,000
<b>Total</b>	<b>44,59,000</b>	<b>43,09,000</b>	<b>26,66,000</b>

Total for all levels = 1,14,34000  
or say Rs. 11.4 million

### TEACHERS TRAINED AS COMPARED WITH THE TARGETS OF EDUCATION POLICY

	<u>PRIMARY</u>		<u>MIDDLE</u>		<u>SECONDARY</u>	
	<u>Policy Target</u>	<u>Actually Trained</u>	<u>Policy Target</u>	<u>Actually Trained</u>	<u>Policy Target</u>	<u>Actually Trained</u>
1977-78	14516	3095	6462	4358	6452	202
1978-79	14965	2665	6682	5524	6652	942
1979-80	15428	1756	6868	NIL	6857	325
1980-81	15906	6397	7081	NIL	7070	620
1981-82	16383	2951	7293	305	7282	596
<b>Total</b>	<b>77178</b>	<b>16864</b>	<b>34386</b>	<b>10187</b>	<b>34313</b>	<b>2685</b>
1982-83	16874	1389	7512	38	7500	428

Percentage of targets (1977-78 to 1981-82)

Primary = 21.84%  
Middle = 29.63%  
Secondary = 7.83%

## INCREASE IN PER TEACHER COST OF TRAINING

Average per teacher cost during 1977-79 to 1981-82

Primary teacher :	Rs. 196/-
Middle teacher :	Rs. 436/-
Secondary teacher:	Rs. 511/-

Average cost of 1982-83

Primary teacher:	Rs. 425/-
Middle teacher:	Rs. 750/-
Secondary science teacher	Rs. 1050/-
Secondary arts teacher:	Rs. 950/-

## AN ALTERNATIVE MODEL FOR IN-SERVICE TRAINING OF PRIMARY TEACHERS

The scheme for establishment of Decentralized Resource Centres (DRCs)

Objectives:

- i) To provide in-service training at low cost.
- ii) To provide easy access to in-service training.
- iii) To provide opportunities for continuous professional growth.
- iv) To ensure steady infusion of educational innovations into the primary schools.

Work done so far:

1. 116 DRCs have been established. Paper, books, duplicating facilities have been provided to all by UNICEF. Some DRCs have been provided modern A.V. Aids and science equipment as well.
2. E.E.C. has provided training to:
  - i) 232 master trainers of DRCs,
  - ii) 116 heads of DRCs, and
  - iii) 48 DEOs.

3. E.E.C. has produced 12 supplementary readers for primary teachers.
4. DRCs have trained 4503 primary teachers in 104 courses of one week duration from April, 1979 to Jan., 1982.

### **Cost of DRC programme**

The entire project of establishing and equipping 116 DRCs and providing additional facilities to E.E.C. as well as training of 29600 primary teachers, all A.E.Os and D.E.Os was to cost Rs. 89,74,000/- upto 1981.

The total funds provided by UNICEF for training and equipment, books (to be purchased locally) amount to Rs. 4,07,000/-

No more funds are forthcoming from UNICEF for the time being.

### **TRAINING OF SCHOOL SUPERVISORS**

#### **PROBLEMS:**

- (i) The obsolescence of knowledge and skills of the supervisory staff due to the adoption of modernized curricula;
- (ii) The rapid increase in the number of schools' while the number of supervisors did not increase proportionally;
- (iii) Meeting 5th Plan targets of 7.7% increase in enrolment per year – which meant the holding power of schools must be increased, more schools must be opened (6661 new primary schools and 4000 mosque schools were planned).

**PLAN:** A programme entitled 'Enhancement of Educational Supervisory Capacity at primary level' was launched with UNICEF assistance in 1979.

#### **A. Plan Targets:**

- (a) To enhance the supervisory capacity of
  - 450 AEOs
  - 27 DEOs
  - 500 Centre Headmasters
- (b) To increase the mobility of supervisory staff by providing

- 21 jeeps to female DEOs
- 262 motorcycles to AEOs

B. Planned Action Sequence:

- i) Analysis of current supervisory practices.
- ii) Collection of data from the field and using the same for making projections for educational planning in various areas. The data to be obtained from DEOs, the teachers and the community leaders.
- iii) Designing models of training programmes and using these models for training of supervisors and administrators.
- iv) Training of AEOs and DEOs
- v) Refining of model and further training.

C. Work Done:

- i) Preparation of questionnaires for field survey of current practices of supervision.
- ii) In-service training course for AEOs to collect data about present practices.
- iii) Collection of data from the field-5 districts.
- iv) Preparation of outlines of training courses and preparation of pre-tests, post-tests to evaluate in-service courses.

## UNDP PROGRAMME FOR TRAINING OF EDUCATIONAL ADMINISTRATORS

- Preliminary Work: Study of present structures, procedures and practices of educational administration and management in Punjab.
- Identification of problems.
  - Defining objectives of training.

# WORKSHOP ON EDUCATIONAL ADMINISTRATION AND MANAGEMENT

Oct 22 - Nov 5, 1981

Workshop activities:

- Presentation Lectures
- Group discussions
- Problems solving exercises
- Individual projects.
- Pre-tests and post-tests to evaluate the outcome

Follow up.

Participants: 43 Dy Dirs., Asstt. Dirs., AEOs, Principals, DEOs, etc.

**PROBLEMS IN THE COLLECTION OF VALID EDUCATIONAL STATISTICS IN PAKISTAN**

(Paper submitted for the consideration of Seminar participants by Mr. Shafiqur Rehman, Technical Assistant, Curriculum Wing, Ministry of Education)

Educational Statistics, according to Good, are the facts in isolation before exploration of their bearing on the subject. According to King, "the science of Statistics is the method of judging collective, natural or social phenomena from the results obtained from the analysis or enumeration or collection of estimates". Statistics play an important role in planning and research. This is a tool in the hands of planners which helps them to rationalize the process of planning, without which neither the planner nor the administrator can perform his job successfully.

Most countries of the world are faced with increasing demands for education, but their resources are limited. Therefore, the most appropriate answer for this is planning, which is not possible without educational statistics or data. Data may be raw or derived. Its sources may be primary or secondary.

Data is of two types, qualitative and quantitative. The qualitative data includes objectives of education, quality of education, equality of opportunity to education and the teacher education, etc. while the quantitative statistics consist of data on students and teachers, school buildings, furniture, equipment and teacher salaries, etc.

The main purposes of educational statistics are, that:

- (i) It tells us about the future student populations for which education would be needed. It helps in the projection of additional teachers and school buildings and equipment, etc. required.
- (ii) It helps in the forecast of educational output in terms of educated or trained manpower which will be needed for other sectors.

- (iii) It helps in the estimation of the future costs for the educational system.
- (iv) It gives useful information for educational research, e.g. for the efficiency of the educational systems in the light of educational plans.
- (v) It gives a picture of the administration of the educational system.
- (vi) It gives a broad picture of educational sector for the general public.

**COLLECTION OF DATA:**

Generally the educational data is collected through:

- i) Regular census of students, teachers, buildings, equipment and other assets of educational institutions.
- ii) Regular sample surveys.
- iii) Adhoc surveys.
- iv) Population census.
- v) Routine reporting of data obtained as a by-product of educational administration.

In Pakistan, the basic process of collection of data from the schools is nearly the same all over the country. The questionnaires/proformas for this purpose are sent one month before the census day to all the institutions. In Punjab the data is collected as it stood on last working day of the academic year. In the provinces of Sind and N.W.F.P., it is collected every year in the months of January and October respectively and in Baluchistan it is collected as it stood on September 30, of the year. No date is fixed for FATA/FANA. In Federal Areas the Central Bureau of Education is trying to streamline it on the basis of 31st May.

The head of a primary/middle school fills the proforma of educational statistics and sends it to A.D.E./Education Supervisor who after

compiling it sends to D.E.O. (District Education Officer). The headmasters of the high schools send this proforma directly to the D.E.O., while in some areas it is collected by S.D.E.O. through ADEO/Supervisor or headmasters and then sent to D.E.O.

This data is compiled by Directorate of Education, Provincial Education Department and then sent to the Central Bureau of Education where it is consolidated and printed for the use of planners and policy makers in the Federal Ministry of Education.

Similarly the data on colleges is collected and compiled by the Directorates of Education and then despatched to the Central Bureau of Education or Education Department.

The statistics of the Universities are collected by the University Grants Commission and then supplied to the Federal Government.

### **PROBLEMS:**

Following are a few problems identified during the visit to the Directorate of Education, D.E.O. Office and Central Bureau of Education, which is responsible for compilation and printed of Educational Statistics at national level.

1. Wrong reporting of data (e.g. ghost schools)
2. The data is inconsistent when the fresh data is compared with the data of previous years.
3. Heavy fluctuations in the figures are found without any justification or explanation of casual factors.
4. Questionnaires are received very late resulting into lag in data compilation, which is about 2-3 years.
5. Internal inconsistencies are found in the tables of same nature with different break-ups.
6. The break-ups required by the policy-makers are not available.
7. Actual data on educational expenditure is not available.

8. Poor responses.
9. Aims of data collection are not clear or some times hidden and the priority assigned to the collection of data is low as compared with administrative matters.
10. Shortage/non-availability of trained staff.
11. There are frequent transfers of the trained field staff engaged in the collection of statistics.
12. Lack of facilities for data analysis.
13. Collection of data of the same nature by more than one agency.
14. Non-realization of the importance of collection of educational data.
15. Fear of administrative consequences, i.e. closure of schools due to under-enrolment, bad results, etc.
16. Lack of conscientiousness.
17. Office records are not maintained properly.
18. Data on private educational institutions are not included in the reports on the assumption that they are not under the control of the Government although they are supplementing our educational system. So we miss a large number of institutions, their expenditure, enrolments, students and teachers.

## **SUGGESTIONS:**

- (a) A uniform school census day preferably 1st June may be observed, as the admissions are completed by that date.
- (b) Coverage should be complete and the educational statistics of recognized and registered private institutions may be collected as well.

- (c) The administrators and educational personnel at primary and higher levels who are involved in the collection of statistical analysis should be made conscious of the importance and usefulness of educational statistics.
- (d) Collection of educational statistics may be made a part of teacher training, as they are the people who prepare raw data.
- (e) Sub-divisional Education Officers, A.D.E.Os and Supervisors should be trained in this art and the trained field staff should not be transferred frequently.
- (f) Records in the offices should be maintained properly so that the data be easily obtained whenever required.
- (g) The questionnaires for the collection of data should be simple, attractive, handy and understandable, as many heads of schools at lower level cannot even understand the language of the proformas.
- (h) A standard proforma should be utilized throughout the country. One such proforma was recently prepared at the Central Bureau of Education.
- (i) Most of the staff engaged in the process are heavily loaded and they think it an extra burden and consider it a thankless job. A nominal honorarium should be given.
- (j) A check system should be evolved to ensure the validity of data. D.E.Os should make surprise visit to verify the authenticity of data.
- (k) Only one agency should collect educational data and the others should utilize it for their purpose.
- (l) To avoid time lag, target dates should be fixed for the collection of different questionnaires in accordance with the nature of the information.
- (m) For valid educational statistics a large scale movement for data collection should be launched as Management Unit for Study and Training has done in certain areas of N.W.F.P.

- (n) Provincial and central authorities should directly obtain data from the D.E.Os to save time.

## TRAINING

The group consisting of the following persons met under the chairmanship of Mrs. Shams Abbasi, Director, Bureau of Curriculum Development and Extension Centre, Sind:

– Dr. Musarrat Ali Khan	Chairman
– Dr. Tanwir Jahan Gorgani	Member
– Mr. Abdus Samad	“
– Mr. M. Iqbal Malik	“
– Mr. Khurshid Ahmad	“

The group considered the aims of the Academy as set out in the PCI Form, and restricted its discussions to the second aim, namely:

“Developing training programmes for different categories of personnel in educational planning, administration, supervision, research and evaluation”.

The group specifically noted the use of “*developing* training programme” and *not* “*organizing* training programme”.

In the broader sense, it would include the entire personnel of the Education Departments :

– all primary school teachers	Curriculum evaluation
– all heads of primary schools	Curriculum supervision with some administration
– all secondary school teachers	Curriculum evaluation
– all heads of secondary schools	Curriculum supervision with some administration

– all Assistant Education Officers	Administration and curriculum supervision
– all DEO’s Dy. Directors and above	Administration
– all lecturers, professors, etc.	Curriculum evaluation
– all principals of colleges	Administration with little supervision

The total target clientele comes to about 3 lakhs. We are told, (this needs confirmation) that according to the project document, the clientele of the Academy will be District Education Officers and all officers comparable to this rank or above. If it is correct, then the clientele will reduce to about 800, which appears to be reasonable.

The group feels that the Academy should *organize* training courses as well in addition to *developing* training courses for the next category of personnel such as Deputy Education Officers and Headmasters of high schools.

Comparing the Academy with the Administrative Staff College and keeping in view the estimated reasonable maximum potential of the Academy, the group recommends that the clientele for the training courses to be organized by the Academy may be as under:

- i) All officers working in the planning sectors, cells or wings of the Provincial and Federal Education Department and the Ministry.
- ii) All District Education Officers and officers comparable to their rank and above, including Principals of colleges, Directors and Deputy Directors.
- iii) Research workers from Curriculum Bureaus, Extension Centres, Teacher Training Institutions, Boards of Intermediate, Secondary and Technical Education and Textbook Boards etc.
- iv) Master trainers for organizing training courses for Assistant/Deputy District Education Officers, and Heads of Secondary

Schools. The master trainers may be selected from the extension centres, and teacher training institutions.

It may be noted that training courses may be planned keeping in view the job expectations/requirements and problems faced by the participants.

Because of the time constraint, lack of knowledge about the available potential or expertise of the Academy, and the delimitations of the target clientele, the group could not discuss and recommend about:

- schedule of training programme
- topics and contents of courses
- duration of courses
- number of participants in the courses

Some members of the group feel that during the first year, much ground may not be covered because the Academy is yet in infancy stage. From the next year and onward, the Academy should attempt to train about 200 persons each year. Unless substantial proportion of the target clientele is trained, the impact of training will be lost because personnel in the field are changed and replaced frequently. During the first year, priority may be given to the appointment of staff, collection of books and printed material to set up a good library necessary for training programmes and other necessary equipment. In addition to organizing a few courses in educational planning and educational management, the Academy may hold seminars and conferences on critical issues in the field of education.

### MIS FUNCTION OF THE ACADEMY OF EDUCATIONAL PLANNING AND MANAGEMENT

The group comprising of the following studied the MUST model in detail:

– Mr. L. Habib Khan	Chairman
– Mrs. Haroona Jatoi	Member
– Dr. Solaria	”
– Mr. Shafique-ur-Rehman	”

They also discussed the EMIS national project which has been developed by the Ministry of Education for the UNDP Third Cycle Program. The committee arrived at the following conclusions/suggestions:

1. The EMIS project shall be placed, owned and implemented by the Academy.
2. It supports the project as developed by the Ministry.
3. The Academy shall pool together the expertise of national and international consultants for EMIS in the Academy who could cater for the needs of each province as and when asked for.
4. The EMIS needs shall be determined at the Academy with the objective of creating a common core questionnaire for the entire Country. And the Provinces could then add their specific needs questionnaire to it.
5. The Academy shall ensure that information collected is correct and it is handled by personnel equipped with the requisite knowledge and skills in the field of MIS.
6. The Academy shall arrange in collaboration with MUST, simulation exercises, motivational and acquaintance workshops on

the theme of EMIS for all the key-persons of EPM in the provinces.

7. The Academy shall give it top priority.
8. The Zanuttini report shall be followed as guideline for the establishment of EMIS.

Note:

Mr. Zanuttini led an evaluation mission from UNESCO Headquarters review the MUST project and the future of MIS in Pakistan. Mr. Zanuttini is the head of computer services in UNESCO and has in depth knowledge of MIS and its establishment in more than 40 countries of the world. He has developed a detailed plan for EMIS in Pakistan, in consultation with NWFP, Punjab, Sind provinces and the Ministry of Education, respectively. It is a detailed report and has the approval of the Government of Pakistan and UNESCO.

## COORDINATION

The following were the members of this group:

—	Mr. Abdul Jalil	Chairman
—	Dr. Maqsood Alam Bukhari	Member
—	Dr. Said Rasul Malik	”
—	Mr. M. Ijaz Ahmad	”
—	Dr. (Mrs.) Luqman	”

### Issues discussed:

1. Areas for coordination
2. Identification of organizations/agencies engaged in activities relating to educational planning and management
3. Coordination channels and linkages

### Decisions:

#### 1. Areas for Coordination

The Academy in consultation with the appropriate agencies at the international, national and provincial levels identify specific areas for coordination keeping in view its aims and objectives.

Broad areas for coordination may be:

- i) Educational research connected with planning and management
- ii) Training/orientation of personnel connected with planning and management at different levels of administration

- iii) Collection, compilation and analysis of educational data and statistics
- iv) Publication, documentation and dissemination of information in relation to planning and management

## 2. **Identification of Organizations/Agencies for Coordination Purposes**

Similar approach be adopted for identification of organizations/agencies engaged in activities directly or indirectly connected with the programmes of the Academy as proposed for identifying areas of coordination.

## 3. **Coordination channels and linkages**

Horizontal, vertical coordination channels and linkage between the Academy, the international, national and provincial/regional agencies/organizatons.

The Academy may have direct communication links with the organizations/agencies in the provinces but it is considered necessary for coordination within a province that all the information be channelized through the Planning and Management Units at the Education Departments of the Provinces.

## RESEARCH

Following were the members of this Group:

- |   |                          |                   |
|---|--------------------------|-------------------|
| – | Dr. Anwar Khalil         | Chairman          |
| – | Dr. Shaukat Ali Siddiqi  | Member            |
| – | Dr. Abdul Ghafoor        | Member            |
| – | Dr. Nujba Islam          | Member            |
| – | Mr. Riaz Mohammad Baloch | Member            |
| – | Dr. M. Athar Khan        | Member/Secretary. |

The Working Group on Research held its preliminary meeting under the chairmanship of Dr. Anwar Khalil, Director, Institute of Education and Research, Baluchistan University, on 29th December. The group briefly reviewed the “Design of the Work-plan for the Academy of Educational Planning and Management”. The objectives and functions of the Academy were especially examined in the meeting. The Group also reviewed the situation relating to the problems and role of research in educational planning and management in the country. The functions and role of the Academy in organizing and promoting research were discussed in the perspective of educational planning and management in general terms and in a broader connotation. The members of the group undertook more thinking on the subject of research as a function of the Academy and came up with more specific suggestions in this regard.

The group held its final meeting on the 30th December, and prepared its report on research as a function of the Academy of Educational planning and management.

As an autonomous national institution the Academy of Educational Planning and Management should create within its framework a special cell to perform the following broad functions:

- Organization of research activities

- Training for research
- Coordination of research activities

## **Organization of Research Activities**

The Academy may assume the following specific functions for organizing research activities nationally:

**i) Carrying out applied research in Educational Planning and Management**

The Research Cell of the Academy will undertake research activities which will have direct bearing on policy formulation and decision making at the national level. Such research studies may be carried out by the Academy independently or in collaboration with the concerned Divisions or Departments or the Ministry of Education or related organizations.

**ii) Sponsorship of Research**

The Academy will sponsor research studies to be carried out by individuals and institutions outside the Academy, in cases where:

- a) a problem for a research has been identified by the Academy, and which the Academy would, for any reason, like to be undertaken by individuals and institutions anywhere in the country;
- b) a problem for a research has been identified jointly by the Academy and any other individual or organization, and the Academy would assign the study to that individual or institution;
- c) a problem for a research has been identified by an individual or an institution or organization, and which the Academy would like to be carried out in the national interest.

### iii) **Promotion of Research**

In order to promote research activities in the country, the Academy will do the following:

- a) **provide incentives to individuals and organizations for undertaking research.** These incentives may be in the form of rewards, remunerations, and recognition of the work done,
- b) **documentation of research.** The Academy will make available to individuals and institutions or organizations, such information as will be necessary for carrying out research. This may include the following:
  - Establishment of a library of research studies carried out within the country;
  - Availability of research studies, and other documents, with persons, institutions, organizations and libraries. For this purpose the Academy will compile periodical catalogues containing the titles of documents and where they could be found;
  - Dissemination of research studies to research organizations and institutions;
  - Publication of an international research journal.

### v) **Strengthening and utilizing research potentials of research organizations and institutions**

The Academy will devise and use ways and means for strengthening and utilizing the research potentials of:

- a) Institutes of Education and Research of the Universities of:
  - Punjab
  - Sind
  - Peshawar

## Baluchistan

- b) Institute of Education and Research Cell of the Allama Iqbal Open University, which is concentrating on high level professional research studies on educational planning and management;
  - c) Sections of Ministry of Education and other Departments which engage themselves in research activities from time to time.
- v) **Providing facilities of electronic data processing**

The Academy will arrange to provide the facility of electronic data processing for analysis of data in connection with the research studies undertaken by individuals and organizations on behalf of, or under the sponsorship of the Academy.

### **Training for Research**

The Academy will, from time to time, organize training programmes (short-term) for persons or organizations interested in carrying out research studies, or whom the Academy would like to engage in research activities of some kind. While the duration and nature of such training programmes are left to be worked out by the Academy the Group on Research suggests the following levels of training for the research workers:

- |   |                       |
|---|-----------------------|
| — General methods and techniques of research  | Initial training      |
| — Area Specific Training (such as on Experimental/Survey studies, etc.)                 | Second level training |
| — Problem Specific Training (collection and treatment of data and report writing, etc.) | Special training      |

## **Coordination of Research Activities**

As a national institution the Academy will be informed about the research studies completed or being undertaken by various organizations and will develop a system of coordination of the research activities of these organizations.

## **National Group on Applied Research in Education**

The group on Research proposes the formation of a National Group on Applied Research in Education by the Academy for coordination and promotion of high level applied research studies in the field of educational planning and management. The National Group on Applied Research in Education may comprize Directors of IER's, National/Provincial Research Organizations and Research Experts and users of research in the Country.
